This is to certify that Mr. **TAMBE AADESH SUNIL** of class **TE** of institute**SCSMCOE** Nepti, Ahmednagar has successfully completed internship of **18** days.

The internship period was from **24/04/2022** to **15/05/2023.**

(If applicable) The said students has also completed project work named **AutoCAD, ETABS, Staad PRO** during the said internship period.

Earthquake has also become one of the natural challenging factor for the efficient construction work. It is one of the dominant constrains while designing the frame building in the earthquake prone zone. Earthquake is a natural phenomenon as old as history of earth itself and is considered to be the most unpredictable one among all other natural disasters. Now a days, designers and engineers are giving more emphasis towards the earthquake resistance while analyzing and designing any structure to minimize the seismic impact.

Department of Computer Engineering

Office Order

All Staff Members are hereby informed that our department has been following Mentor-student system for a long time to help each student and solve his/her problem. Following Mentees are assigned to respective staff (Mentor) for academic year 2022-23.

1	Prof.Gade N.B.	SE	1-25
2	Prof.Ghadage R.A.	SE	26-50
3	Prof.Agale S.	SE	51-77
5	Prof.Kohakade P.S.	TE	1-25
6	Prof. Sweety Vanve	TE	26-50
7	Prof.Chitale S.A.	TE	51-75
9	Prof.Adsure A.A.	BE	1-20
10	Prof.Gagare S.M	BE	21-40
11	Prof.Sisodia Y.A.	BE	41-60
12	Prof.Lande S.R.	BE	61-86
Total No of Students: 238			

Instructions:-

1. Staff have to compulsorily take a meet of their assigned mentees once a week online or offline mode. If a student does not meet the Mentor on a regular basis, in that case, the mentor will call his/her parents and inform about the irregularity of the student.
2. The Mentor will solve any difficulty he/she faces in all aspects of life, for example, academic difficulties, financial and psychological support, help in resolving problems related to scholarship, university affairs, hostel affairs, guidance for a future carrier, etc.
3. Mentor have to collect personal, academic and non-academic, achievements, extracurricular details, etc of assigned mentees.

APTITUDE TEST

Name of Students : .....

Class:-.....Date:-.....Time :- .....

Department:-..... Roll No.:- .....Day:- .....

Q.1 Two pipes A and B can fill a cistern in $37\frac{1}{2}$ minutes and 45 minutes respectively. Both pipes are opened. The cistern will be filled in just half an hour, if the B is turned off after:

A) 5 Min **B) 9 Min** **C) 10 Min** **D) 15 Min**

Q.2 A can contains a mixture of two liquids A and B is the ratio 7 : 5. When 9 litres of mixture are drawn off and the can is filled with B, the ratio of A and B becomes 7 : 9. How many litres of liquid A was contained by the can initially?

A) 10 **B) 20** **C) 21** **D) 25**

Q.3 **Statement:** Should India give away Kashmir to Pakistan?
Arguments:
i) No Kashmir is beautiful state. It earns a lot of foreign exchange for india
ii) Yes. This would help settle conflicts.

a) Only Argument I) Is Strong **B) Only Arguments Ii) Is Strong**
C) Either I) Or II) Is Strong **D) Niether I) Or Ii)**

Q.4 Find the statement that must be true according to the given information.
Vincent has a paper route. Each morning, he delivers 37 newspapers to customers in his neighborhood. It takes Vincent 50 minutes to deliver all the papers. If Vincent is sick or has other plans, his friend Thomas, who lives on the same street, will sometimes deliver the papers for him

a) Vincent And Thomas Live In The Same Neighborhood.
b) It Takes Thomas More Than 50 Minutes To Deliver The Papers.
c) It Is Dark Outside When Vincent Begins His Deliveries
d) Thomas Would Like To Have His Own Paper Route.

Q.5 Look at this series: 7, 10, 8, 11, 9, 12, ... What number should come next?
A) 7 **B) 10** **C) 12** **D) 13**

Q.6 Look at this series: 22, 21, 23, 22, 24, 23, ... What number should come next?
A) 22 **B) 24** **C) 25** **D) 26**

Q.7 Odometer is to mileage as compass is to
A) Speed **B) Hiking** **C) Needle** **D) Direction**

Q.8 Marathon is to race as hibernation is to
A) Winter **B) Bear** **C) Dream** **D) Sleep**

Q.9 Cup is to coffee as bowl is to
A) Dish **B) Soup** **C) Spoon** **D) Food**

Q.10 SCD, TEF, UGH, ____, WKL
A) CMN **B) UJI** **C) VIJ** **D) IJT**

Q.11 FAG, GAF, HAI, IAH, ____
A) jak **B) hal** **C) hak** **D) jai**

Q.12 Which one bank is not on of the three banks that will be merged to form the third largest bank in india in 2019
A) Vijaya Bank **B) Bank Of Baroda** **C) Indian Bank** **D) Dena Bank**

Q.13 Which movie wins the best motion picture, Drama in 2009 Golden Globes
A) Green Book **B) The Wife** **C) Roma** **D) Bohemian Rhapsody**

Q.13 which is first state in India to implement 10% quota for economical weak in general category
A) Bihar **B) Gujarat** **C) Punjab** **D) Maharashtra**

Q.14 Which of the following countries approved a new constitution of the country in a referendum through secret voting held in February 2012?
A) Libya **B) Iraq** **C) Iran** **D) Syria**

Q. 15 The sensitive index of National Stock Exchange of India is popularly known as....
A) SENSEX **B) CRIS** **C) CSE** **D) Nifty**

* Indicates required question

1. Name of Students *

2. Roll Number

3. Year *

Mark only one oval.

- FE
- SE
- TE
- BE
- Other

4. Mobile Number *

5. Mail ID *

Shri Chhatrapati Shivaji Maharaj College of Engineering Nepti Ahmednagar

6. A train running at the speed of 60 km/hr crosses a pole in 9 seconds. What is the length of the train? * 2 points

Mark only one oval.

- 120 metres
- 180 metres
- 324 metres
- 150 metres

7. The length of the bridge, which a train 130 metres long and travelling at 45 km/hr can cross in 30 seconds, is: * 2 points

Mark only one oval.

- 200 m
- 225 m
- 245 m
- 250 m

8. Look at this series: 2, 1, (1/2), (1/4), ... What number should come next? * 2 points

Mark only one oval.

- (1/3)
- (1/8)
- (2/8)
- (1/16

Shri Chhatrapati Shivaji Maharaj College of Engineering Nepti Ahmednagar

9. Look at this series: 7, 10, 8, 11, 9, 12, ... What number should come next? * 2 points

Mark only one oval.

- 7
- 10
- 12
- 13

10. A batsman scored 110 runs which included 3 boundaries and 8 sixes. What percent of his total score did he make by running between the wickets? * 2 points

Mark only one oval.

- 15 %
- 45 5 %
- 54 6 %
- 55%

11. A fruit seller had some apples. He sells 40% apples and still has 420 apples. Originally, he had * 3 points

Mark only one oval.

- 588 apples
- 600 apples
- 672 apples
- 700 apples

12. A man has Rs.480 in the denominations of one-rupee notes, five-rupee notes and ten-rupee notes. The number of notes of each denomination is equal. What is the total number of notes that he has ? * 2 points

Mark only one oval.

- 45
- 60
- 75
- 90

13. There are two examinations rooms A and B. If 10 students are sent from A to B, then the number of students in each room is the same. If 20 candidates are sent from B to A, then the number of students in A is double the number of students in B. The number of students in room A is: * 2 points

Mark only one oval.

- Option 1
- 20
- 80
- 100
- 200

14. Which of the following statements is not correct? * 2 points

Mark only one oval.

- Option 1
- log10 10 = 1
- log (2 + 3) = log (2 x 3)
- log10 1 = 0
- log (1 + 2 + 3) = log 1 + log 2 + log 3

15. Paw : Cat :: Hoof : ? * 2 points

Mark only one oval.

- A. Lamb
- B. Horse
- C. Elephant
- D. Tiger

16. A boat can travel with a speed of 13 km/hr in still water. If the speed of the stream is 4 km/hr, find the time taken by the boat to go 68 km downstream. * 2 points

Mark only one oval.

- 2 hours
- 3 hours
- 4 hours
- 5 hours

17. A motorboat, whose speed in 15 km/hr in still water goes 30 km downstream and comes back in a total of 4 hours 30 minutes. The speed of the stream (in km/hr) is: * 2 points

Mark only one oval.

- 4
- 5
- 6
- 10

6. What is the difference in the place value of 5 in the numeral 754853? * 2 points

Mark only one oval.

- 49500
- 49950
- 45000
- 49940

7. What is the average of first five multiples of 12? * 2 points

Mark only one oval.

- 36
- 38
- 40
- 42

8. What is the compound interest on Rs. 2500 for 2 years at rate of interest 4% per annum? * 2 points

Mark only one oval.

- Rs. 180
- Rs. 204
- Rs. 210
- Rs. 220

9. Look at this series: 12, 11, 13, 12, 14, 13, … What number should come next? * 2 points

Mark only one oval.

- A. 10
- B. 16
- C. 13
- D. 15

10. Which word does NOT belong with the others? * 2 points

Mark only one oval.

- A. index
- B. glossary
- C. chapter
- D. book

11. CUP : LIP :: BIRD : ? * 3 points

Mark only one oval.

- A. GRASS
- B. FOREST
- C. BEAK
- D. BUSH

12. India's first dugong conservation reserve is planned to be established in which state? * 2 points

Mark only one oval.

- A. Gujarat
- B. Tamil Nadu
- C. Maharashtra
- D. Kerala

13. Former SBI Chairman Rajnish Kumar has been appointed as the economic advisor of which Indian state? * 2 points

Mark only one oval.

- A. Tamil Nadu
- B. Telangana
- C. Andhra Pradesh
- D. Karnataka

14. Which state/UT launched the 'Tourist Village network' to promote tourism and create employment? * 2 points

Mark only one oval.

- A. Goa
- B. Puducherry
- C. Assam
- D. Jammu and Kashmir

Name of Students: .....

Class:-.....Date:-.....Time :- .....

Department:-..... Roll No.:- .....Day:- .....

Q.1 Two pipes A and B can fill a cistern in $37\frac{1}{2}$ minutes and 45 minutes respectively. Both pipes are opened. The cistern will be filled in just half an hour, if the B is turned off after:

A) 5 Min **B) 9 Min** **C) 10 Min** **D) 15 Min**

Q.2 A can contains a mixture of two liquids A and B is the ratio 7 : 5. When 9 litres of mixture are drawn off and the can is filled with B, the ratio of A and B becomes 7 : 9. How many litres of liquid A was contained by the can initially?

A) 10 **B) 20** **C) 21** **D) 25**

Q.3 **Statement:** Should India give away Kashmir to Pakistan?
Arguments:

i) No Kashmir is beautiful state. It earns a lot of foreign exchange for india
ii) Yes. This would help settle conflicts.

a) Only Argument I) Is Strong **B) Only Arguments Ii) Is Strong**
C) Either I) Or II) Is Strong **D) Niether I) Or Ii)**

Q.4 Find the statement that must be true according to the given information.
Vincent has a paper route. Each morning, he delivers 37 newspapers to customers in his neighborhood. It takes Vincent 50 minutes to deliver all the papers. If Vincent is sick or has other plans, his friend Thomas, who lives on the same street, will sometimes deliver the papers for him

a) Vincent And Thomas Live In The Same Neighborhood.
b) It Takes Thomas More Than 50 Minutes To Deliver The Papers.
c) It Is Dark Outside When Vincent Begins His Deliveries
d) Thomas Would Like To Have His Own Paper Route.

Education is the most powerful weapon which you can use to change the world.
– Nelson Mandela

Q.5 Look at this series: 7, 10, 8, 11, 9, 12, ... What number should come next?
A) 7 **B) 10** **C) 12** **D) 13**

Q.6 Look at this series: 22, 21, 23, 22, 24, 23, ... What number should come next?
A) 22 **B) 24** **C) 25** **D) 26**

Q.7 Odometer is to mileage as compass is to
A) Speed **B) Hiking** **C) Needle** **D)** Direction

VISION

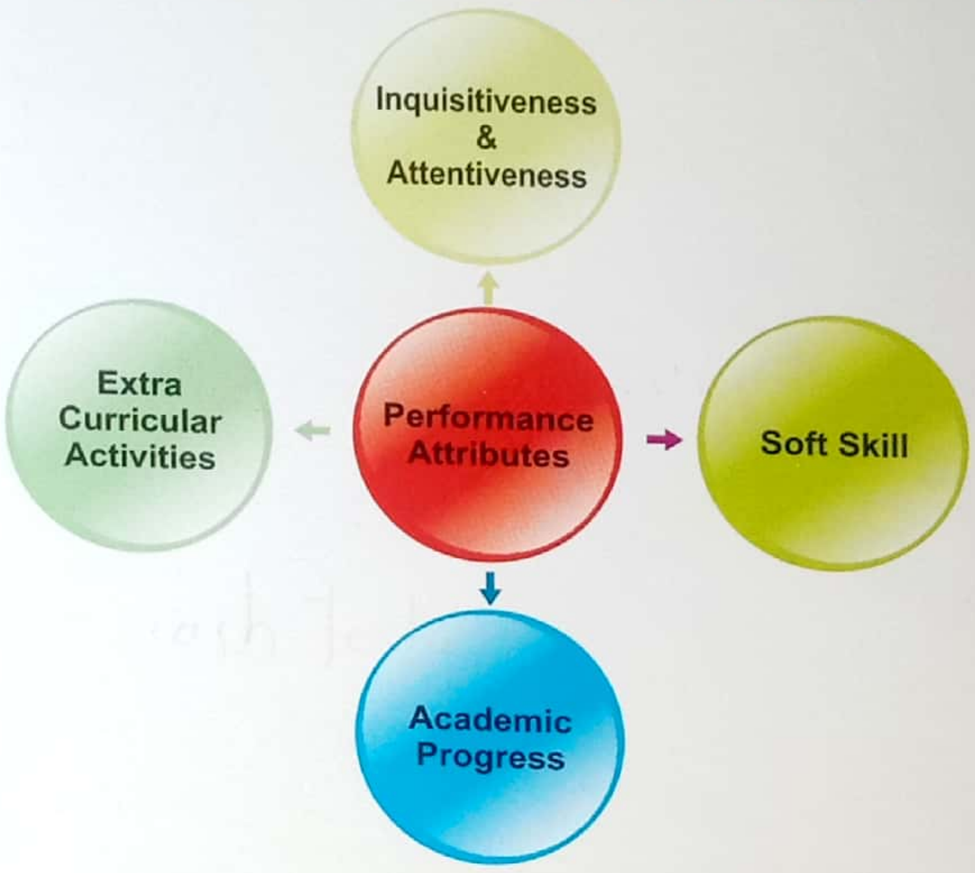

"Tejo Si Tejo Me Dehi"

Oh God! You are the source of luster, grant me luster.

MISSION

- To impart quality education through effective teaching learning methodologies.
- To inculcate positive attitude and moral values amongst future technocrats.
- To promote excellence by encouraging creativity, critical thinking and discipline.
- To inculcate sensitivity toward society and a respect for the environment.

From The Desk of Principal ...

Dr. Yashwant R. Kharde

Ph.D. (Mech.) NITW, ISTE, MIE, CE

Principal

Today, in the era of globalization, knowledge is power. Engineering Education plays a vital role in nation building, corporate sectors and industries. We strongly believe that students, if properly nurtured and educated, can become important assets of society and nation, Keeping in mind that the student is the focal point of all activities we have started this mentoring activity.

Mentoring is a process in which an experienced individual helps another person to develop his or her goals and skills through a series of time-limited, confidential, one to one conversations and other learning activities. Mentors also draw benefits from the mentoring relationship. As a mentor, you will have the opportunity to share your wisdom and experiences, evolve your own thinking, develop a new relationship, and deepen your skills as a mentor. As we have a team of dynamic, talented and devoted teachers to help the students to bring the best out of them.

Our basic objective is to impart quality education through effective learning methodologies and to develop a positive attitude and moral values amongst the students.

The Basic Concept of Mentoring:

Mentorship is a relationship in which a more experienced or more knowledgeable person helps to guide a less experienced or less knowledgeable person. The mentor may be older or younger than the person being mentored, but he or she must have a certain area of expertise. It is a learning and development partnership between someone with vast experience and someone who wants to learn. Mentorship experience and relationship structure affect the "amount of psychosocial support, career guidance, role modeling, and communication that occurs in the mentoring relationships in which the proteges and mentors engaged.

"Mentoring" is a process that always involves communication and is relationship-based, but its precise definition is elusive, with more than 50 definitions currently in use. One definition of the many that have been proposed is, "mentoring is a process for the informal transmission of knowledge, social capital, and the psychosocial support perceived by the recipient as relevant to work, career or professional development; mentoring entails informal communication, usually face-to-face and during a sustained period of time, between a person who is perceived to have greater relevant knowledge, wisdom, or experience (the mentor) and a person who is perceived to have less".

Mentoring means making a sincere effort to communicate with a student, with an open heart and an open mind.

Good mentoring practice empowers students by encouraging and supporting each student in successful achievement of goals, and adapting to the academic, social, political and cultural mores of the institution.

"EVERY GREAT ACHIEVER IS INSPIRED BY A GREAT MENTOR."

Scanned with CamScanner

Aim & Objectives

Aim of the Program: The aim of mentoring is to promote positive change in an individual while building a healthy relationship. The mentoring program is also devised to encourage students from non-English speaking backgrounds and those from rural and remote communities.

Objectives:

* Setting up a career development mentoring program for students to learn the skills and behaviours.
* Creating a mentoring program for students to give them one-on-one guidance.
* To provide a framework for positive interaction between students, Mentors and staff.

Role of Mentor

During the course of most mentor relationships, mentor roles are likely to include:

- **Guide:** A guide takes you through a journey, providing different pathways and warning of potential pitfalls. A mentor can offer wise perspective and can encourage growth by asking the right questions, throwing out ideas, and keeping conversation and creativity moving. This advisory role also requires the mentor to help the mentee develop professional interests and set realistic career goals.

- **Coach:** A coach provides motivation and feedback. Positive feedback to reinforce behavior and constructive feedback to change behavior. Both types are critical to the professional growth of the mentee. Positive feedback is a great motivating tool for removing doubt and building self-esteem which results in a sense of accomplishment.

- **Advisor:** A mentor works with the mentee to develop a career development plan that outlies what knowledge, skills and abilities are needed to reach career goals.

- **Counselor:** The counselor role establishes a lasting and open relationship. Respect and confidentiality are baselines for this relationship. A mentor encourages the mentee identify their strengths and weaknesses and develop problem-solving skills.

- **Advocate:** An advocate champions the ideas and interests of the mentee. Advocates act as a sponsor, creating opportunities that challenge and instruct the mentee, setting them up for success. The goal is to provide as much exposure and visibility for the mentee, with a minimum of risk. This role primarily involves initiating opportunities for development by helping establish a network of contacts, helpful resources and a path to success.

- **Role Model:** Teaching by example is a mentor's most effective developmental tool.

Scanned with CamScanner

A Successful Mentor

* Value the mentee as a person;
* Develop mutual trust and respect;
* Maintain confidentiality;
* Listen both to what is being said and how it is being said;
* Help the mentee solve his or her own problem, rather than give direction;
* Focus on the mentee's development and resist the urge to produce a clone.
* Respects the student's commitment by making good use of their time and by being prepared and on time for every meeting.

Characteristics of an Effective Mentor

* Supportive of the needs and aspirations of the mentee.
* Willing to spend time performing mentoring responsibilities.
* Respected in the community and profession.
* Communicates openly and clearly.
* Comfortable providing constructive feedback.
* Has a genuine interest in helping others succeed.
* A respectful, inspiring and positive attitude.

Responsibilities of the Mentor

* Assist your mentee in identifying professional and personal growth goals and objectives.
* Assist your mentee in establishing explicit goals and objectives for the relationship.
* Commit to meeting with mentee on a regular basis. Establish how and when those meetings will take place.
* Complete progress reports and regularly re-assess needs.
* Review agreements reached in the Mentoring Agreement at regular intervals of the partnership.
* Maintain the confidentiality of the relationship.

Characteristics of an Effective Mentee

* Positive outlook and attitude
* Eager and open to learn proactively
* Patient, responsive and respectful of mentor's role and time
* Comfortable receiving objective feedback
* Works as a "team player"
* Comfortable being stretched out of a comfort zone

Scanned with CamScanner

Guidelines for the Mentee :

* Allow your mentor to take the lead in the relationship, at least initially. Listen and respect the opportunities, limitations and format of the relationship he or she is able to provide for you. Always act with courtesy and respect towards your mentor.

* Use active listening skills during discussions with your mentor. Be careful not to interrupt, unless you need to clarify a point and you see no other opportunity or pause. Take notes when appropriate, ask good questions and have a purpose for your questions.

* Prepare the goals and objectives you have for your career. Be prepared to ask for specific guidance and advice on your goals, plans and strategic ideas. The more specific you can be, the easier it will be for your mentor to help you.

* Take the initiative to ask for feedback. Feedback, although difficult to hear at times, is critical to your personal and professional growth and development. Demonstrate that you are open to hear new ideas and suggestions to bring out your best and overcome any blind spots. Get feedback on specific issues, for example, how you come across to others. Ask for specific details to ensure you understand specific behaviors. Tell your mentor how you prefer to get feedback (for example, direct, with humor, softened). Don't get defensive. Thank your mentor for taking the risk to be honest with you. Remember, if your mentor was not invested in you, he/she would probably not take this risk. Honest feedback gives you an opportunity to improve yourself and help you to move towards fulfilling your potential.

* Always be considerate and respect your mentor's time as you do your own. Be thorough, but succinct in your explanations, experiences and comments. Watch for clues that you may be going on too long. It is polite to ask directly if you are talking too long.

* Return phone calls promptly and be on time with commitments or meetings. If your mentor offers a specific time frame of availability, respect his/her wishes by following through. Only extend the time of your contact if your mentor initiates or insists to extend or complete a task or discussion.

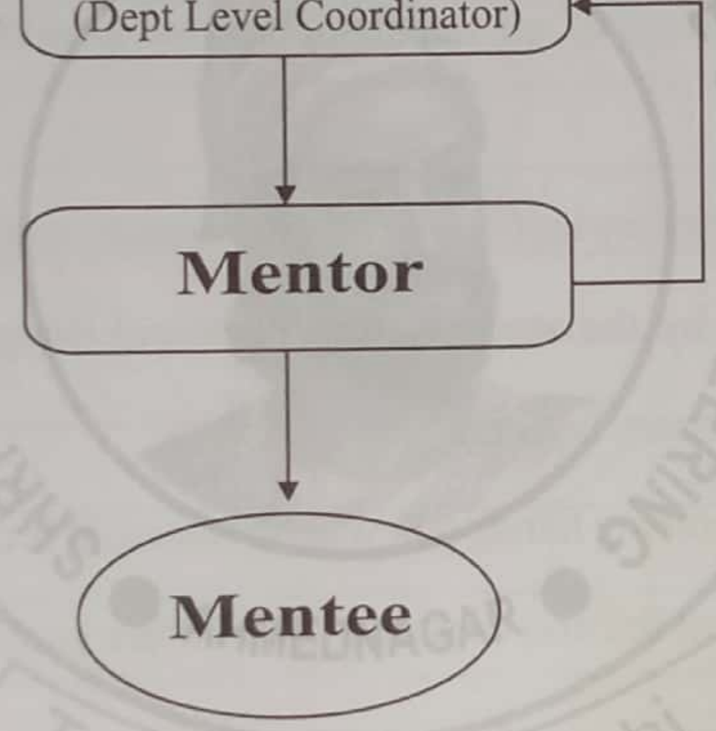

* Seriously consider all advice or suggestions you receive. Arguing why the mentor's advice would not work, can be construed as rude and close-minded.

* Demonstrate that you have followed advice or commitments for action at every opportunity, even if you have modified your plan. Pointing out that you used your mentor's help and sharing outcomes is important.

Scanned with CamScanner

Mentoring Process

A) Flow Chart

B) Formation of Organization :

1. Formation of batches. (Batch size- 15 to 20 students)
2. For each batch one Mentor is assigned who is a teacher to this batch.
3. For one class, 3 to 4 bathes are there and one Class Teacher is there.
4. For each department, one department coordinator is appointed. (i.e. Chief Mentor)
5. Every department is coordinated by institute level coordinator (i.e. Lead Mentor)

Scanned with CamScanner

C) Implementation Process

1. As per the guidelines decided and formed by the respected Principal Sir will be communicated to mentor through HOD's and chief mentor.
2. Chief Mentor of the Department discusses these policies among the HOD, class teacher and mentor.
3. As per the academic calendar, the Mentor meetings will be conducted by the Mentor of their assigned batch.
4. In the Mentoring meeting, the concerned faculty discusses various activities among the students. He/she also considers the different issues raised by the mentees (students).
5. After every meeting with the mentees, the mentor has to take outcomes of previous meeting, to compile the report and to submit it to the Class teacher.
6. The class teacher has to submit the compiled report of all batches to the department Chief Mentor.
7. The Coordinator (Chief Mentor) of all departments has to submit the report to institute level coordinator.
8. The compiled report is submitted by institute level coordinator to the Principal Sir.
9. As per the suggestion given by the students, the Principal Sir gives direction to the concerned faculty or department for necessary action.
10. For each mentee separate mentoring handbook will be issued. It is duty of respective mentor to keep and update the handbook and at the end of academic year the handbook should be submitted in the department.

To,
Project Manager,
GHV India Construction Pvt. Ltd,
Ghogargaon, Ahmednagar.

Subject -Regarding Permission to industrial visit at your Hot Mix Plant and Road Construction Site.

Respected Sir,

Shri. Chhatrapati Shivaji Maharaj College of Engineering, Ahmednagar is established in year 2011 by Ahmednagar Jilha Maratha Vidya Prasarak Samaj's, Ahmednagar. The college is approved by AICTE, New Delhi, Recognized by DTE, Mumbai and affiliated to University of Pune, Pune. The college runs four branches of engineering viz. Civil Engineering, Computer Engineering, E&TC Engineering and Mechanical Engineering

As per the curriculum of Savitribai Phule Pune University, a visit to Hot Mix Plant and Road Construction Site, under the subject of Transportation Engineering is mandatory for the student of final year Civil Engineering.

I kindly request you to permit our 76 final year Civil Engineering student for visit to your Hot Mix Plant and Road Construction Site. Our two staff members will also a company them. You are also requested to spare technical person to give information about Hot Mix Plant and Road Construction Site.

Your help in this regard is highly appreciated. Thanking you in anticipation.

Yours Faithfully

Dr. Kharde Y. R

PURPOSE OF VISIT

Our main purpose for this visit was to give the practical knowledge about hot mix plant working , labrotary tests carried out at companys site, process of bitumen mix . By this visit students can be familiar with industrial environment and get knowledge of how large scale highway projects are carried out . Also in 7th semester subject like Transportation Engineering requires knowledge about how road construction , highway embankment process etc. are done properly , so it is very much convenient to see all the practical and components in real time work environment.

Detail Visit Report.

Date of Visit : Thursday , 12 Nov , 2022

Place of Visit : Bitumen Hot Mix Plant , GHV INDIA PRIVATE LTD, Ahmednagar – Ghogargaon 4 lane highway project , Solapur Road , Ahmednagar

Address : Ahmednagar - Solapur Road , Rui Chattisi , Ahmednagar

Faculty Incharge : Prof. M. Athare And Prof . Pagare . S

Technical Expert : Er. Ravi Verma , Er. Audeshkumar Gupta , Er. Muhammad Nadeem , Er . Rajshekhar Reddy

A] Introduction :

The aim at ongoing construction site visit was to make students aware of practical and field aspects of highway designing and detailing of various structural elements. The site named as "Ahmednagar – Ghogargaon 4 lane Highway project " situated at old running solapur highway , Rui Chattisi , Ahmednagar taken as a site of visit with the reason of having ongoing working of bitumen plant and Labrotary work of viscocity test, marshall stability test and test that must be required for bitumen mix before it application on highway. The labrotary test was in progress during site visit.

Details of Study at Site:

This site visit is organized on 12 Nov 2022. Before we went for the site visit, our lecturers gave us a brief information about the safety precautions that we should be alert of we enter the bitumen plant site. On the day we visit, we gather at college at 10.00 am for travelling by bus to reach the project construction site at 12.00 pm . This construction site was near Rui Chattisi villege , Solapur Road .

During the site visit we have been observed various types of tests are carried out to test bitumen mix sample and aggregates as per NHAI standards . Er. Ravi Verma Explained us about various test as follows .

Testing perform on the Bitumen and Aggregate in the testing lab

1. Ductility test
2. Stripping value test
3. Presentation test
4. Flash and fire point test
5. Specific gravity of aggregate
6. Aggregate crushing value
7. Aggregate impact value
8. Marshall stability test
9. Shape Test

Such a various tests are performs on bitumen and aggregates.

1.MARSHALL STABILITY TEST :

Er. Ravi Verma explained us about very important marshall stability test which is carried on bitumen mix round block . He told us this test is also known as **flow test for bitumen** .

Fig : bitumen specimen in marshall stability apparatus mold

Sir told that stability of the mix is defined as a maximum load carried by a compacted specimen at a standard test temperature of 600C. The flow is measured as the deformation in units of 0.25 mm between load and maximum load carried by the specimen during stability test (flow value may also be measured by deformation units of 0.1 mm

TEST PROCEDURE :

1.Specimens are heated to 60 + either in a water bath for 30-40 minutes

or in an oven for minimum of 2 hours.

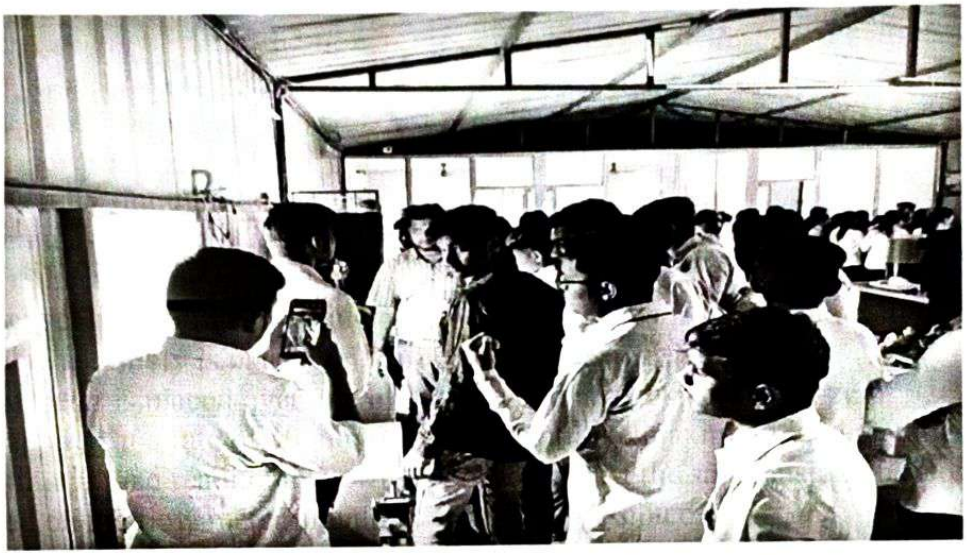

2.The specimens are removed from the water bath or oven and place in lower segment of the breaking head.

3.The upper segment of the breaking head of the specimen is placed in position and the complete assembly is placed in position on the testing machine.

4.The flow meter is placed over one of the post and is adjusted to read zero.

5.Load is applied at a rate of 50 mm per minute until the maximum load reading is obtained.

6.The maximum load reading in Newton is observed. At the same instant the flow as recorded on the flow meter in units of mm was also noted

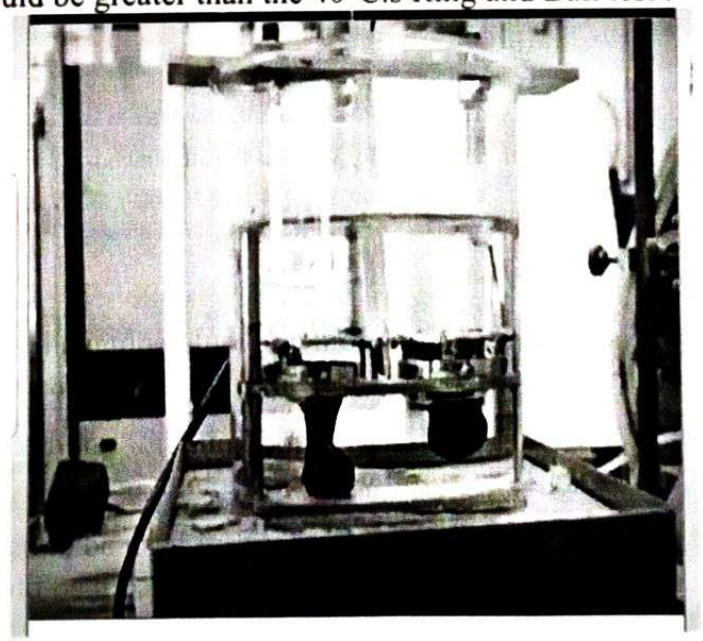

Verma sir shown marshall stability apparatus and its working

2. SOFTNING TEST :

The softening point test is the temperature at which the substance attains particular degree of softening under the specified conditions of the test.

The apparatus used to determine softening point of bitumen is RING AND BALL assembly.The softening point of various bitumen grades generally lies between 35°C to 70°C.

Softening point of bitumen to be used for road construction at a place where the maximum temperature is 40°C should be greater than the 40°C.s Ring and Ball test .

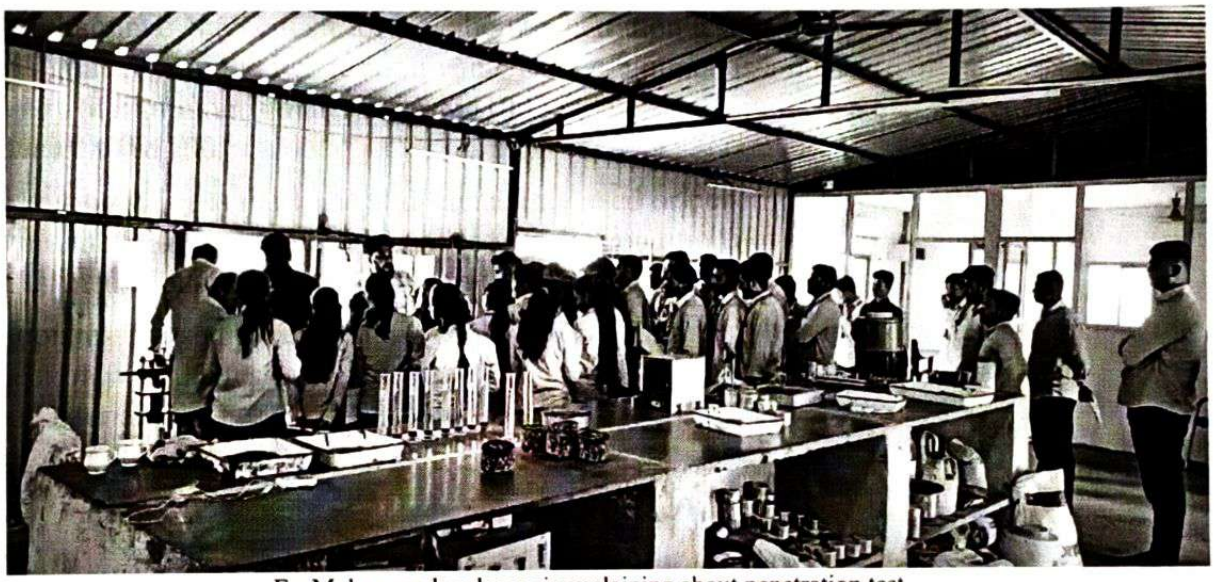

3. PENETRATION TEST :

Er. Mohammad Nadeem sir told us about penetration test to find penetration consistancy value of bitumen sample . Penetration value test on bitumen is a measure of hardness or consistency of bituminous material. A 80/100 grade bitumen indicates that its penetration value lies between 80 & 100.

Penetration value is the vertical distance traversed or penetrated by the point of a standard needle into the bituminous material under specific conditions of load, time and temperature. This distance is measured in one tenths of a millimeter.

Penetration test is used for evaluating consistency of bitumen. It is not regarded as suitable for use in connection with the testing of road tar because of the high surface tension exhibited by these materials

Er. Muhammad nadeem sir explaining about penetration test

4.Compressive Strength Value Test :

It is one of the most common test which is necessary and carried out on regular basis . in every labrotary . In this lab , M50 grade of concrete blocks were made at rmc plant lab and

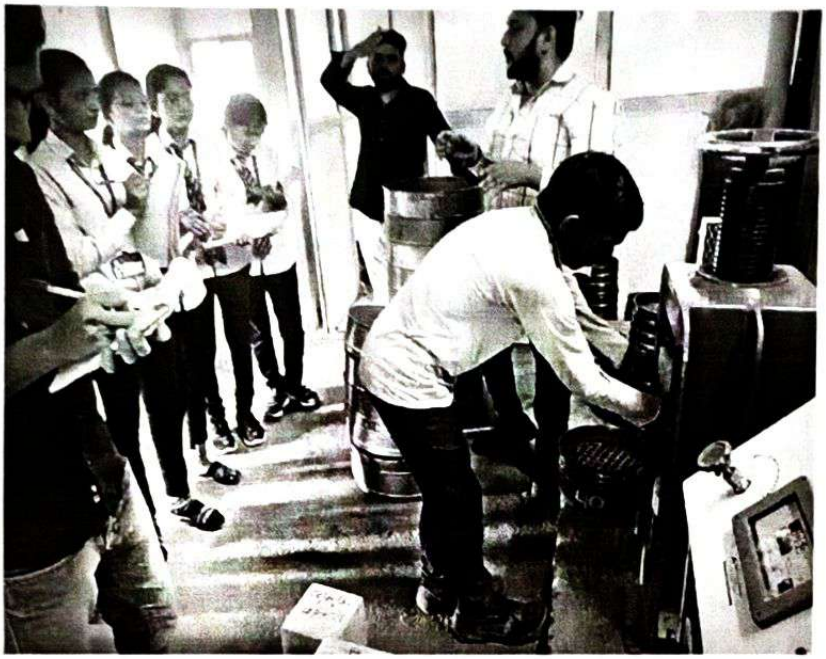

get strength check after dipped in the water tank for 3 , 7, 28 days .

In their lab , they have apparatus of Compressive testing machine .

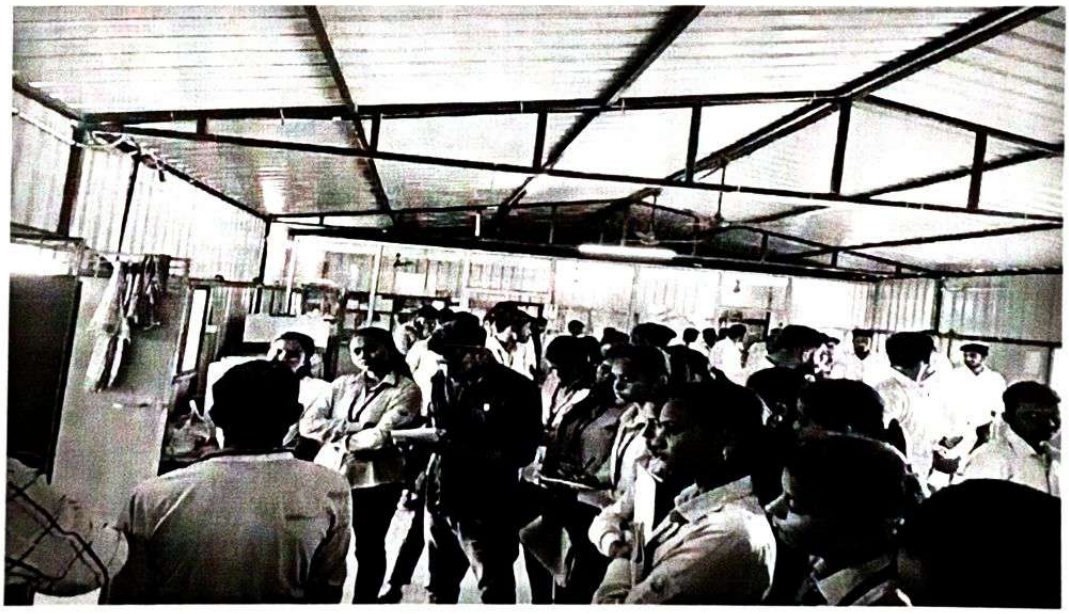

Er. Ravi Verma and Er.Audeshkumar Gupta told us about the complete process of compressive strength test machine as follow .

1. For cube test two types of specimens either cubes of 15cm X 15cm X 15cm or 10cm X 10cm x 10cm depending upon the size of aggregate are used. For most of the works cubical molds of size 15cm x 15cm x 15cm are commonly used.
2. This concrete is poured in the mold and appropriately tempered so as not to have any voids.
3. After 24 hours, molds are removed, and test specimens are put in water for curing. The top surface of these specimen should be made even and smooth.
4. This is done by placing cement paste and spreading smoothly on the whole area of the specimen.

5. These specimens are tested by compression testing machine after seven days curing or 28 days curing.
6. Load should be applied gradually at the rate of 140 kg/cm2 per minute till the Specimens fails. Load at the failure divided by area of specimen gives the compressive strength of concrete.

(1)

(2)

Image : compressive strength test apparatus explained by Er. Ravi verma and Er. Mohammed Nadeem

4. Flash and Fire Point Test :

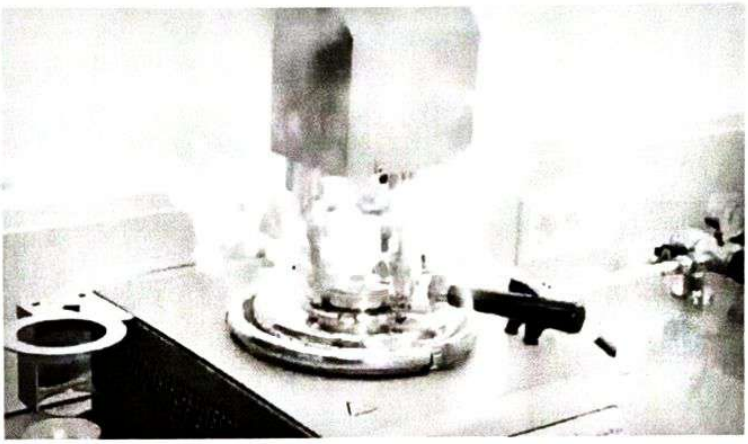

fig: flash and fire point test at lab

Flash and Fire point test is one of the most important test in bitumen sample testings

PROCEDURE :

1.It is conducted to know the safe mixing and application tempreture values .

Heat the bitumen to above its softening point generally 75oC to 100oC and stir this softened bitumen thoroughly to remove air bubbles.

2. Fill the cup with softened bitumen up to the filling mark provided on the cup.

Now place the lid and close the cup. Other accessories like thermometer and flame exposure are suitably fixed in their respective positions.

Now lit up the flame and set the size of flame to 4mm in diameter.

3.he bitumen getting heated and preferred rate of heating should be 5oC to 6oC per minute.

Stirring of sample should be simultaneously done along with heating using stirrer device.

4.The rate of stirring should be approximately 60 revolutions per minute.

Observe the thermometer carefully and when the temperature is 17oC below the actual flash point (175OC) lit up the test flame.

The test flame size should be of 4mm diameter and carry it close to the heating sample.

5.Apply the test flame for every 1OC rise from this point and remember during application of test flame the stirring should be stopped.

image : Flash and fire Point test practical

HOT MIX BITUMEN PLANT VISIT:

After the wonderful labrotary visit , Er. Nadeem and Er. Verma sir decided to show us the most important bitumen hot mix plant. It was very much special as we aspected .

Image : GHV india private limited , bitumen hot mix plant

OPERATIONS AT BITUMEN PLANT :

The capacity of the hot mix plant Is 170 to 200 tones per hour . Bitumen does get coated with aggregates until the it is heated . In the hot mix plant 4 tanks are provided for the storage of the bitumen.

There are 2 types if heating the mix : A) by using coal
B) by using Diesel

In this plant coal is used. The coal is getting pulverized and sends it towards the mix of aggregate stock, 10mm, 20mm, 40mm aggregate are used as per requirement.

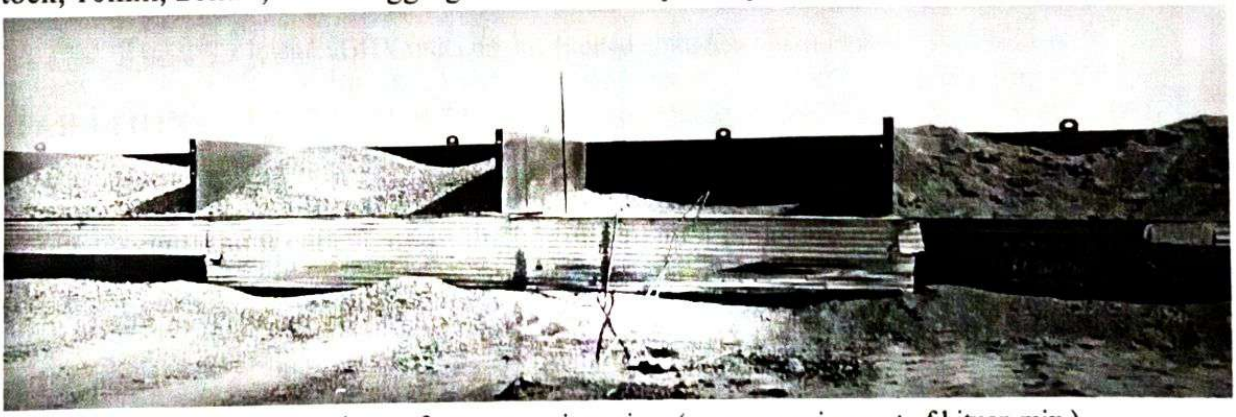

image : mechanisum of aggregate sieve sizes (as per requirement of bituen mix)

Image : aggregate conveyor belt attached to aggregate heat treat machine

In this rectangular column,

heat is provided by pulverized coal towards burner through pipes. Which is then heated by flumes goes in dryer. In that rectangular column rotator screens are provides for heating of aggregate. The heated aggregate get cleaned and comes in downward hopper. Below which the aggregate get mixed with bitumen. Control panel is used for taking the accurate quantity of the materials.

Plant working :

Remaining bitumen is again reused because it is a non decomposable material. It cannot be it is as non plastic material. land o r water because it can contaminate them. So it is reused for the plant. The arrangement is provided that the bitumen directly goes in mixture. For softening of bitumen requires temperature of more than 160 °C. It is used in this plant for heating of bitumen. And for the aggregate 10-15°C more temperature is used for coating of mixture which is controlled bymonitor.The remaining fines in this plant are in the form of fine aggregates or dust is used in the plant asfilter for binding the mixture. It can also be usedín the

Image : Er. Ravi verma explaining working of bitumen storing tanks having various tempretures.

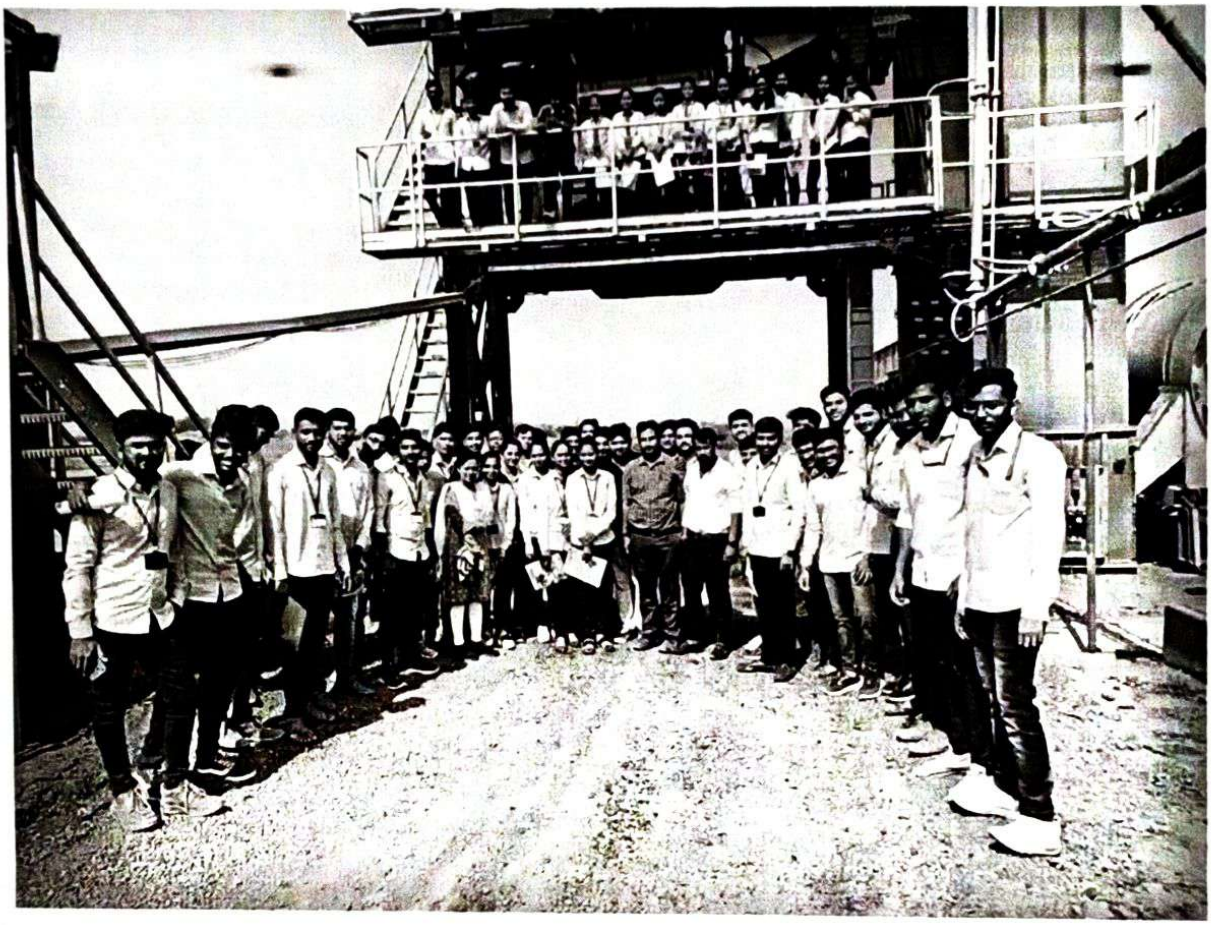

Image: Engineer sir explaining various considarations about bitumen plant.

Hot mix :

A mixture of asphalt binder and. graded mineral aggregate, mixed at an elevated temperature and compacted to form a relatively dense pavement layer.

Group photo at HOT MIX PLANT of Site Visit :

Vehicles required for bitumen application on road site :

image: bitumen mix rippler and Road roller

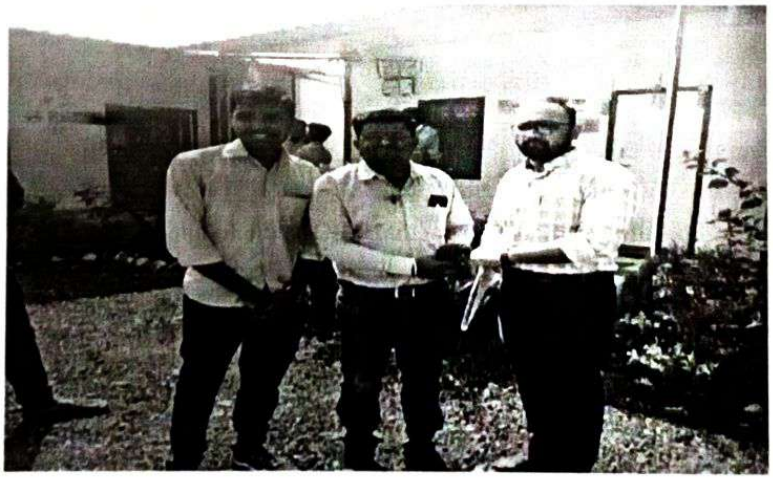

Image: bitumen carrying vehicle - Truck

After seeing the amzing hot mix plant we saw companys own vehicles that use for Highway road construction .

Image : group photo at GHV india prt. Ltd . Base Office site

After all the visit end at 4.30 pm , it was important to falicitate the person made such a wonderful visit possible by his side .Our prof. athare sir thanked senior supervisor mr. shivaji rao bhosale sir for organizing such a great visit .

Summary

This visit helped UG students to enhance their collective theoretical and practical knowledge of industrial highway construction site. Students can understand detailed design of all components of road embankment and process which were covered in the subject of transpotation engineerning . They can identify their prospective study areas for their further study and research. Physical observation of various processes of construction will definitely be enhanced the skill and understanding of students in the field of highway engineering by bitumen application and got the knowledge about detailed process of civil construction.

Subject - Permission to visit at PEB Structres.

Respected Sir,

Shri. Chhatrapti Shivaji Maharaj College of Engineering, Ahmednagar is established in year 2011 by Ahmednagar Jilha Maratha Vidya Prasarak Samaj, Ahmednagar. The college is approved by AICTE, New Delhi, Recognized by DTE, Mumbai and affiliated to University of Pune, Pune. The college runs four branches of engineering viz. Civil Engineering, Computer Engineering, E&TC Engineering and Mechanical Engineering with intake of 60 students each.

As per the curriculum of Savitribai Phule Pune University, a visit to Structure likes Steel Column. Connections, Truss, Base Plate etc

I kindly request you to permit our 68 Third year Civil Engineering student for visit Ahmednagar Railway Station. Our two staff members will also accompany them. You are also requested to spare technical person to give information about Steel Structural Member (e.g. Beam, Column, Joints etc).

Your help in this regard is highly appreciated. Thanking you in anticipation.

Yours Truly,

Royal Technologies MIDC Ahmednagar

VISIT REPORT

Department of civil Engineering

A.Y:- 2022-2023

Day & Date: - Wednesday, 09th Nov 2022

Visit to: - "Design of Steel Structure".

Visit at: - MIDC Ahmednagar.

Visit under Subject: -Design of Steel Structure.

Staff in Charge. - Prof. S. A. Jagtap, Prof. S. S. Pagare,.

Aim: -

This visit is arranged, to give extra practical knowledge & to know more about the information of "Design of Steel Structure". Mr. Datta Shende, filter inspector & Mr. Sudhakar Pawar, Scada operator. Has given a deep knowledge of each unit of Truss, from aeration of water to portable water. He also told that Gantry Girder and type of connection is a multifaceted engineering discipline dealing with the design, construction, and operation of all types of filtration units. It encompasses a wide range of engineering disciplines, including civil engineering, computer engineering, electrical engineering, mechanical engineering, industrial engineering,and production engineering.

He has showed the various units of the Type of Steel Structures such as following-

1. Roof truss :-

A truss is a framed structure consisting of different members like a tie, principal rafter, strut, and slings, forming triangles i.e. a perfect frame. Used when the span is very large and the beam construction is not economical, the building is in an area of heavy rainfall.

The Span Of Roof Truss	=	15 m
Spacing Of Roof Truss	=	4 m
Rise Of Roof Truss	=	3 m
Height Of Roof Truss	=	Above ground 20m
A.C Sheet	=	150 $N/^{m2}$
Weight Of Purlin	=	120 $N/^{m2}$
Total No. Of Panels	=	8 m
Openings Of Wall Area	=	10%
Life Of Roof Truss	=	25 years
Terrain Category	=	3 class (a)
Topographic Plan	=	Horizontal and upwind slope $< 3^0$

Fig: - Roof Truss. (Field House)

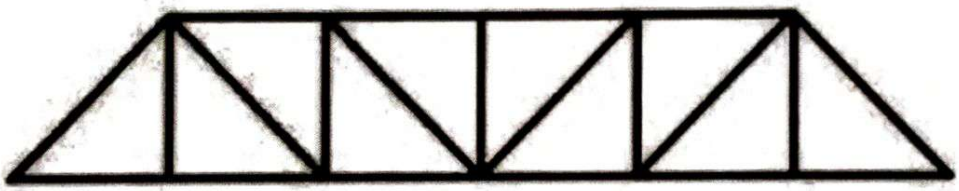

Types of Roof Truss Are As Follows: -

1. PRATT TRUSS : -

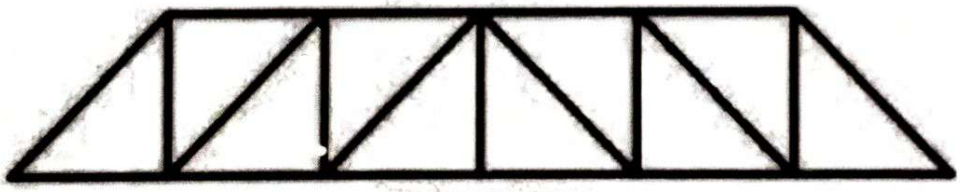

Pratt trusses are commonly used in long span buildings ranging from 20 to 100 m in span. In a conventional Pratt truss, diagonal members are in tension for gravity loads. This type of truss is used where gravity loads are predominant

2. HOWE TRUSS: -

The parallels in each chord are usually built up out of smaller beams, each small beam fastened to one another to create a continuous beam. In wooden Howe trusses, these slender beams are usually no more than 10 to 15 inches (250 to 380 mm) wide and 6 to 8 inches (150 to 200 mm) deep

PRATT TRUSS

HOWE TRUSS

3. BELGIAN TRUSS:-

Belgian truss used in supporting large sloping roofs; in the form of three isosceles triangles-one in the center with its base along the horizontal tie, and each of the outer two having its base along the sloping sides of an upper chord.

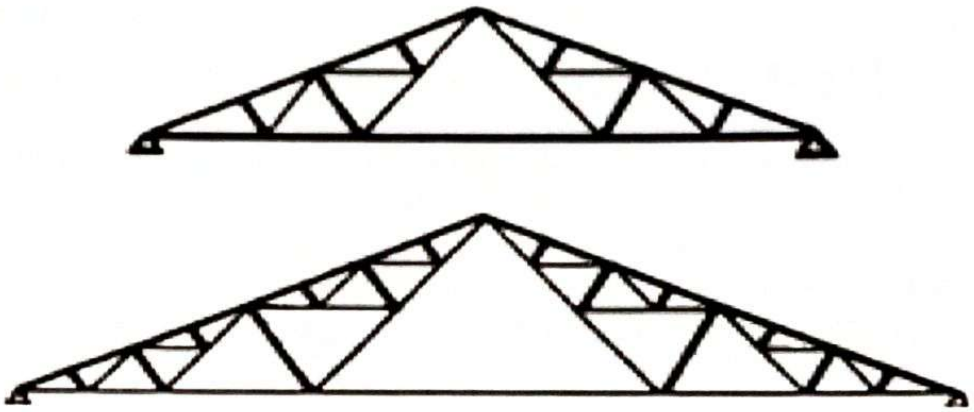

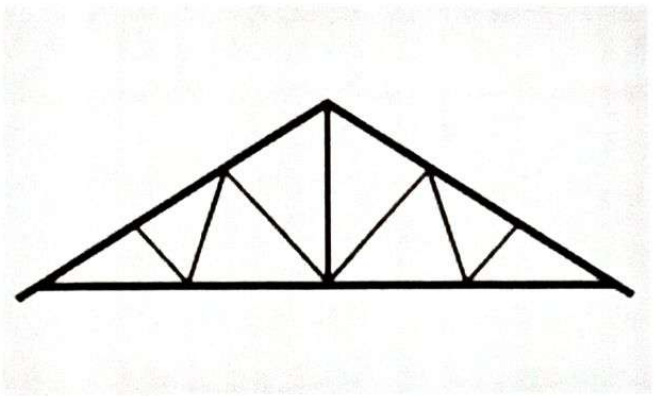

Fig: - Belgian truss.

4. FINK OR FRENCH TRUSS:-

The Fink truss is a commonly used truss in residential homes and bridge architecture.-It originated as a bridge truss although its current use in bridges is rare.

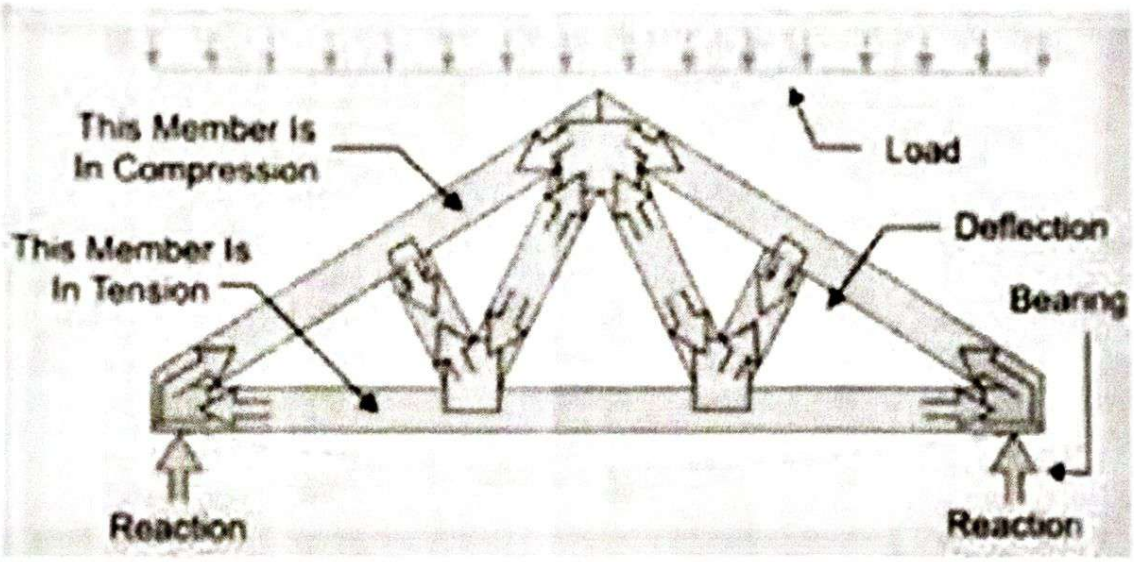

-

Fig: - Fink Truss.

Purpose of truss: -

A truss gives a stable form capable of supporting considerable external load over a large span with the component parts stressed primarily in axial tension or compression. The individual pieces intersect at truss joints, or panel points.

2. Gantry girder :-

Gantry Girders are provided in industrial buildings to support overhead cranes for. the transportation and lifting of heavy load. These cranes may be manually (hand) operated overhead travelling cranes (MOT) or electrically operated overhead. travelling (EOT) cranes.

Fig: - Gantry Girder.

Loading on gantry girder:-

1. **Vertical load:-**

   It include the self-weight of crane, self-weight of the crab and the crane capacity.

2. **Lateral load:-**

   It is also called as surge loads. It may be caused by thrust due to sudden stopping of the crab and load when traversing the crab girder.

3. **Longitudinal load:-**

   It is also called as drag load. It may be caused due to stopping and starting of the crane girder and produce thrust along the rails.

4. **Impact load:-**

   These loads are occurred due to suddenly applied breaks, rapidly moving loaded cranes acceleration, retardation vibration, possible slip of slings etc.

3. Battens and lacing:-

Battens are plates or any other rolled section used to connect the main components of compression members. Battens should be placed opposite to each other on the two parallel faces of compression members. Number of battens in a column should be such that member is divided into not less than three bays.

Lacing consists of connecting the components of the column by a system of generally flat plates. (In some cases angles and channels are also used as lacings). Lacing plates may be 50 mm to 75 mm wide and 8 mm to 10 mm thick.

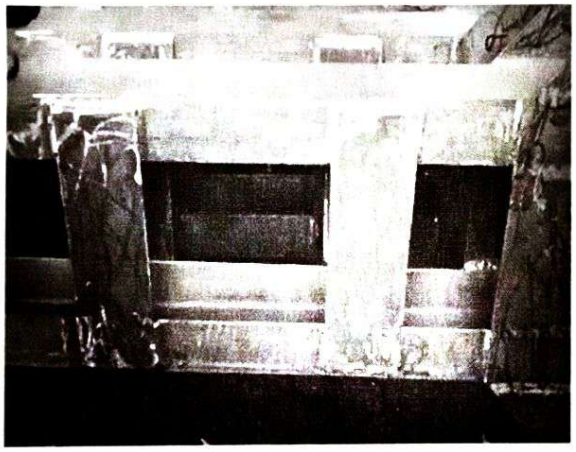

Fig: - Battens.

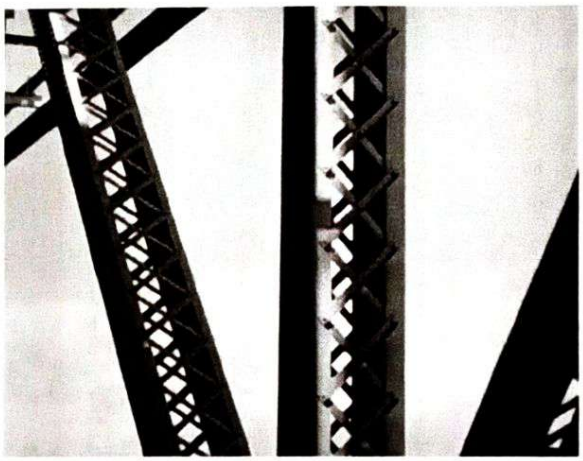

Fig: - Lacing

4. Types of connections:-

I. Bolted connections:-

Bolted connections are a type of structural joint used to join two or more structural components in a steel structure using bolts. Bolts are a form of threaded fasteners which has a male thread and performed matching female thread, such as nuts.

Fig: - Bolt Connection.

II. Welded connections:-

Welded connections are connections whose components are joined together primarily by welds. Welds can be classified according to: Types of welds: groove, fillet, plug, and slot welds. Positions of the welds: horizontal, vertical, overhead, and flat welds.

Fig: - Weld Connection.

Summary: -

After visiting the site, we fully understand the practical aspect of Design of truss & its units in comparison to theory aspect in book. The different types of method implemented on steel structure at units.

The Deputy Engineer,
E&M Sub Division'
Water Treatment Plant,
MIDC, Ahmednagar.

Subject – Regarding Permission to industrial visit at your Water Treatment Plant.

Respected Sir,

Shri. Chhatrapati Shivaji Maharaj College of Engineering, Ahmednagar is established in year 2011 by Ahmednagar Jilha Maratha Vidya Prasarak Samaj's, Ahmednagar. The college is approved by AICTE, New Delhi, Recognized by DTE, Mumbai and affiliated to University of Pune, Pune. The college runs four branches of engineering viz. Civil Engineering, Computer Engineering, E&TC Engineering and Mechanical Engineering.

As per the curriculum of Savitribai Phule Pune University, a visit to Water Treatment Plant site, under the subject of Water Supply Engineering is mandatory for the student of third year Civil Engineering.

I kindly request you to permit our 68 third year Civil Engineering student for visit to your Water Treatment Plant. Our two staff members will also accompany them. You are also requested to spare technical person to give information about Water Treatment Plant.

Your help in this regard is highly appreciated. Thanking you in anticipation.

VISIT REPORT

Name: - DEHAREKAR SUMIT SUNIL

Class:-T.E Civil

Roll No:-23

Department of civil Engineering

A.Y:- 2022-2023

Day & Date: - Wednesday, 09th Nov 2022

Visit to: - "Water Treatment Plant".

Visit at: - Water Treatment Plant MIDC Ahmednagar.

Visit Under Subject: - Water Supply Engineering.

Staff In Charge.: - Prof. S. S. Pagare, Prof. S. A. Jagtap.

Aim: -

This visit is arranged, to give extra practical knowledge & to know more about the information of "water treatment plant". Mr. Datta Shende, filter inspector & Mr. Sudhakar Pawar, Scada operator. Has given a deep knowledge of each unit of water treatment plan, from aeration of water to portable water. He also told that water treatment plant is a multifaceted engineering discipline dealing with the design, construction, and operation of all types of filtration units. It encompasses a wide range of engineering disciplines, including civil engineering, computer engineering, electrical engineering, mechanical engineering, industrial engineering, and production engineering.

He has showed the various units of the water treatment plant such as following-

1. Aeration: -

Aeration is the process by which air is circulated through, mixed with or dissolved in a liquid or substance.

Aeration is used in liquid, soils and foods to improve quality and reduce

There are two types of aeration are as follows: -

A) Natural aeration (cascade type): -

This type of aerator work done naturally such as removing smells & dissolved oxygen from air. Water by gravity comes on the plant from intake well. Water can aerate in this aeration unit.

B) Artificial aeration (air diffusion type): -

This type of aerator get water by gravity same as above but the process of aeration is different. In this method perforated pipes are fixed in the tank & mixed air water due to upward moment of air remove CO2, dirty smell and mixed oxygen.

Fig. Natural Aerators.

Fig. Artificial Aerators.

2. Flash mixtures: -

In the treatment plant raw water are having very low turbidity in all seasons. It is within the permissible limit that is >1 so they do not add coagulation water.

Fig. Flash Mixer

3. Clarifocculator (sedimentation): -

Sedimentation is the process of depositing sediment. It is a treatment process in which the velocity of the water is lowered below the suspension velocity and the suspended particles settle out of the water due to gravity, centrifugal acceleration or electromagnetism. We can see circular sedimentation tank. 3-4 retain water in this tank for setting the particles or sediments.

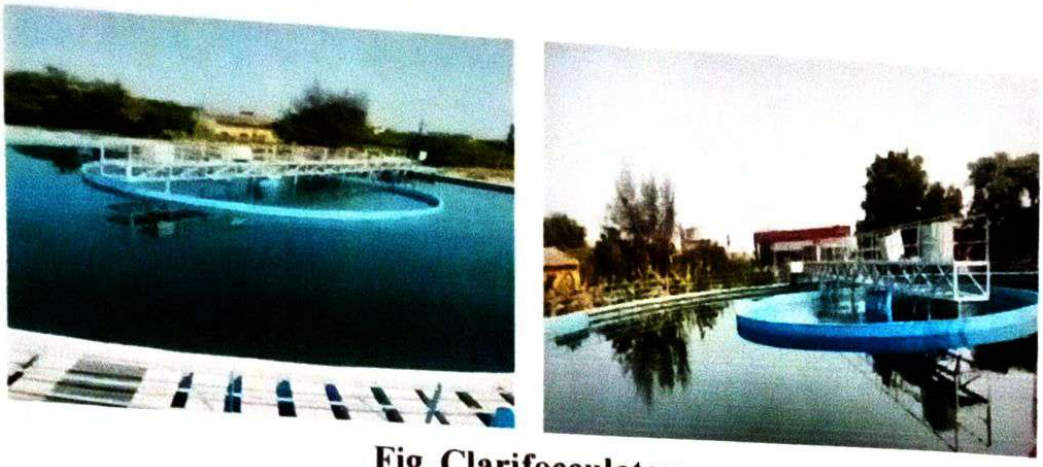

Fig. Clarifocculator.

4. <u>Filtration: -</u>

Filtrations any of various mechanical, physical or biological operations that separate solids from fluids (liquid or gases) by adding a medium through which only the fluid can pass. The fluid that passes through is called the filtrate.

We can see four-layer rapid sand filter bed such as follows: -

1. Gravel
2. Medium gravel.
3. Sand
4. Fine sand

These four layers are in this filter bed. this is rapid sand filter so they can do back washing 5-6 days or as per requirement. When water level can rise in the filtration unit i.e., rate of filtration can be slow then the can done back washing.

Fig. Rapid Sand Filtration Bed.

5. Disinfection (chlorination): -

It is the method of disinfection by which the micro-organisms are killed if chlorine & its components are used.

Generally, in raw water E- coil bacteria are found. Which is very harmful so disinfection is required. Disinfection unit having liquid chlorine tank. Chlorine added in water in pre-determination quantity. Chlorine reaction with water are as follows: -

$H_2O + CL_2 <=======> H^+ + CL^- + HOCL$ (hypochlorous)

$HOCL <=======> H^+ + OCL^-$ (hypochlorite)

This hypochlorous is kill visible & non-visible bacteria. Then disinfection take place.

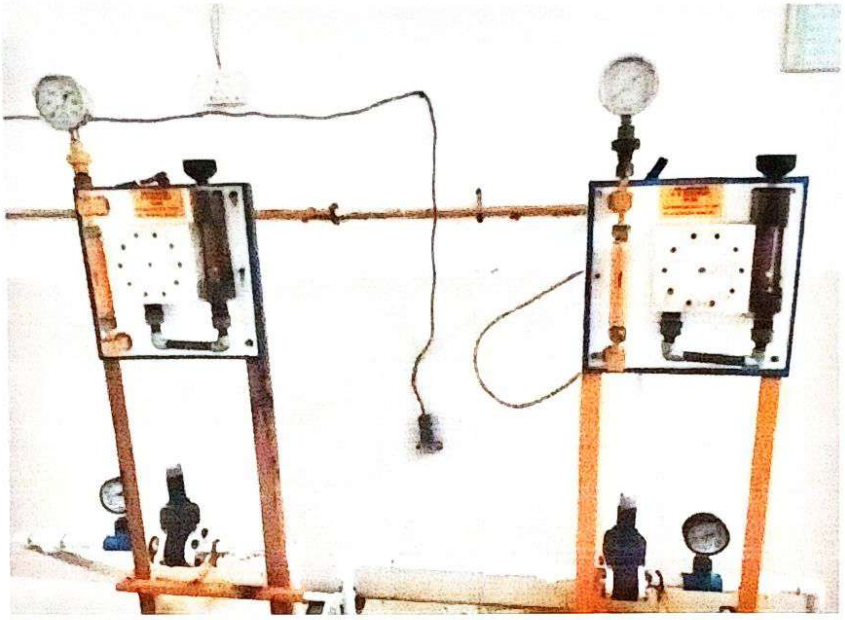

Fig. Chlorination Process Unit.

6. Underground storage tank: -

There are four large size underground storage tank. Then that treated water can store in underground storage tank.

7. Pumping house, elevated storage tank & distribution: -

Water which is store in underground storage tank that can be pumped in elevated storage tank.

There are two elevated storage tanks. they having capacity of 13,50,000 lit each.

Then water can be distributed from elevated storage tank by gravity to all city.

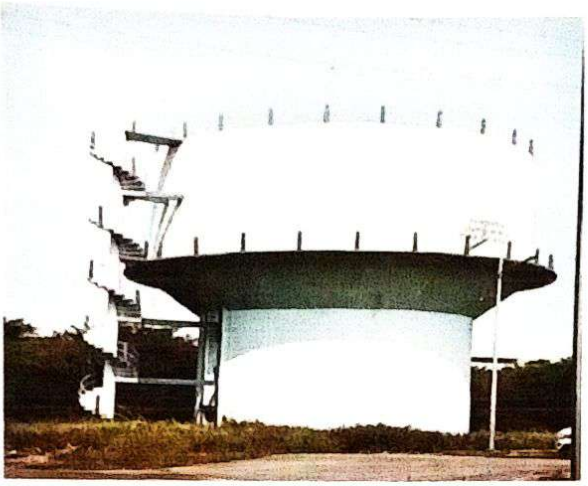

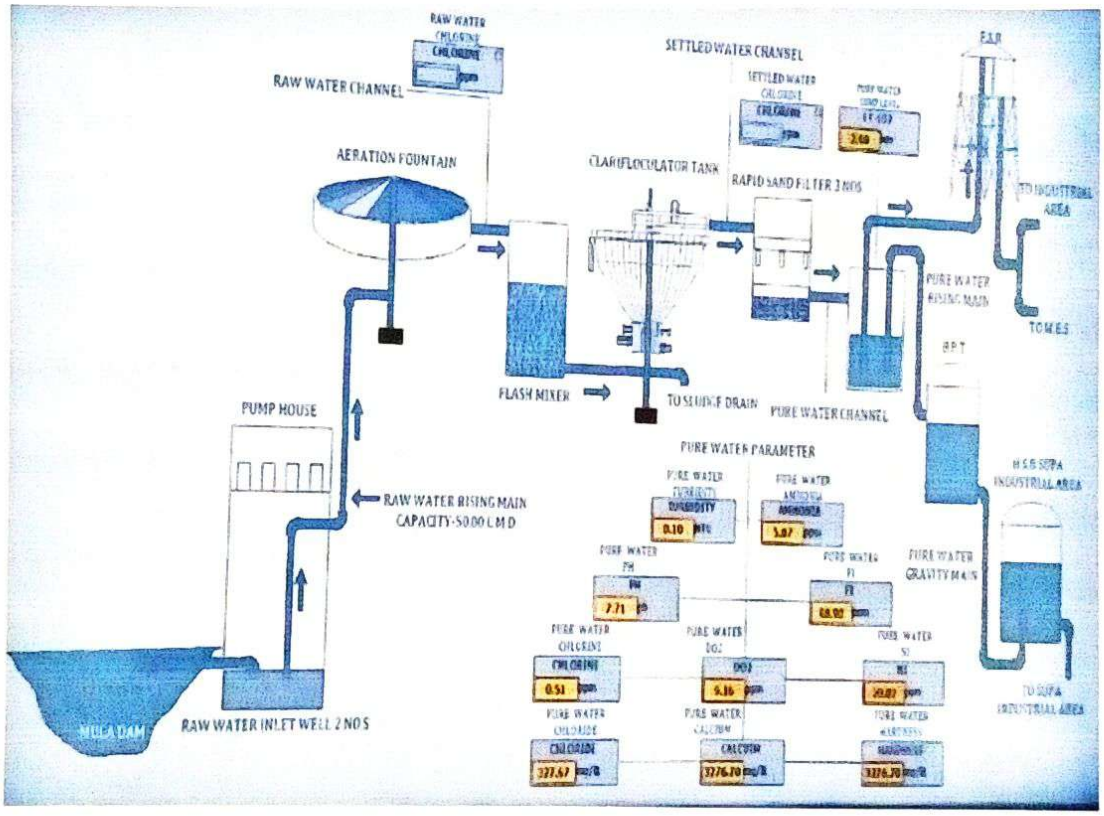

Fig. Elevated Storage Tank Of 13,50,000 Lit Capacity Each.

M.I.D.C. NAGAR WATER SUPPLY FLOW DIAGRAM

Summary: -

After visiting the site, we fully understand the practical aspect of water treatment plant & its units in comparison to theory aspect in book. The different types of method implemented on the plant at units.

Fig. (TE Civil) Group Photo At The Ahmednagar MIDC Water Treatment Plant.

Subject: Approval Letter for Industrial Visit

Dear Sir,

I am writing this letter to approve your request that you made on 18/10/2022 for visiting to our industry.

I am pleased that you are interested in visiting our industry. I would like to schedule a date 4th Nov 2022 and time 11:00 am for you.

I can assure you that our industry will give your student significant knowledge during this visit. I hope this visit will give your student to know things practically through interaction and working methods. It will lessen the gap between lessons and the practical working environment.

Thanking you,

Yours truly,

NOTICE

All the Students are informed that Department is organizing visit of BE Civil Students to Klassic Wheels Limited, Unit-III, Near Sahyadri Chowk, Manmad Road, MIDC, Ahmednagar, on 4th Nov 2022. All students have to report upto 9:45am at Sahyadri Chowk, MIDC, Ahmednagar. All students should be in proper uniform with ID card.

In order to smooth conduction of visit, following committees are formed.

Sr No	Description of Work	Incharge
1	Discipline & Photographs	Prof. M. S. Sarode
2	Letter of permission, Conduction, Overall Coordination & Reports	Prof. P. G. Nikam

And all respected subject teachers are directed to prepare visit report and feedback form for their subject visit. The Xerox copy of permission letters of industry should be submitted towards Mr. R. R. Dagdiya.

VISIT REPORT

ON

Industry with reference to Air Pollution Control Devices

Class : BE Civil

Department of Civil Engineering

A.Y. 2022-23

Date of Visit : Friday, 4th November 2022

Place of Visit : Klassic Wheels Ltd.

Address : E7&8, MIDC, Nagar-Manmad, Ahmednagar, Maharashtra, India

Faculty Incharge : Prof. P. G. Nikam

Technical Expert : Mr. Tanvir Inamdar (Safety Manager)

A] Introduction :

We visited Klassic Wheels Ltd to understand the how the polluted Air is Treated in industry. Classic Wheels Ltd. is a global Automotive Steel & Alloy Rim Manufacturer Company located in Ahmednagar, MIDC. The company manufactures steel rims for 2-wheeler, 3 wheeler and 4 Wheeler and also wheels for 2-wheeler Vehicles.

Manufacturing Process:

In Company we observe manufacturing process which is as Follows :

1. PRESS SHOP

Photo 1 : Sheet Metal Pressing

2. RIM SHOP

Photo 2 : Wheel Rim Assembly lines

3. CED COATING

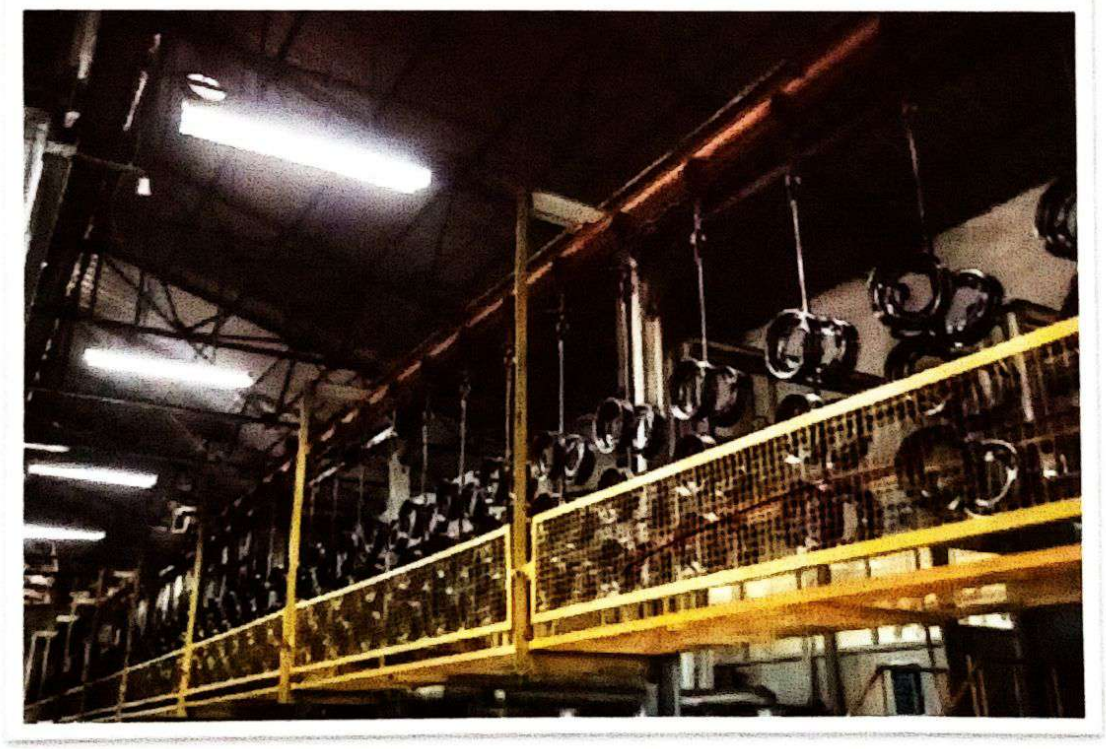

Photo 3 : CED Coating Lines

4. TOP COAT

Photo 4 : Top Coating Lines

5. CNC SHOP

Photo 5 : CNC Machining

6. DISPATCH

Photo 6 : Dispatch

Treatment on Polluted Air in Klassic Wheels :

The gases which are emitted after the melting of row material Aluminum at 700 degree celcius. which is further get treated for controlling the air pollution. The gases are Hydrogen fluoride gases and particulates, fluorides, alumina, carbon monoxide, sulfur dioxide and volatile organics are produced. Due to that toxic gas their is need of treat that gas. For treatment wet Scrubber is used.

Wet Scrubber :

In wet scrubbing processes, liquid or solid particles are removed from a gas stream by transferring them to a liquid. The liquid most commonly used is water. A wet scrubber's particulate collection efficiency is directly related to the amount of energy expended in contacting the gas stream with the scrubber liquid. Most wet scrubbing systems operate with particulate collection efficiencies over 80-90 percent. Wet scrubbers can also be used to remove acid gas; however, this section addresses only wet scrubbers for control of particulate matter.

Meachanism :

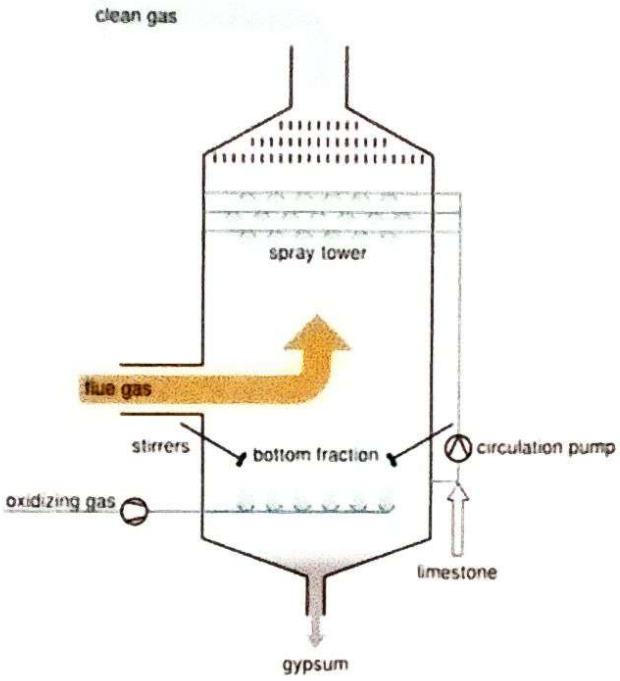

Fig 1 : Wet Scrubber Meachanism

All wet scrubber designs incorporate mist eliminators or entrainment separators to remove entrained droplets. The process of contacting the gas and liquid streams results in entrained droplets, which contain the contaminants or particulate matter. The most common mist eliminators are chevrons, mesh pads, and cyclones. Chevrons are simply zig-zag baffles that cause the gas stream to turn several times as it passes through the mist eliminator. The liquid droplets are collected on the blades of the chevron and drain back into the scrubber. Mesh pads are made from interlaced fibers that serve as the collection area. A cyclone is typically used for the small droplets generated in a venturi scrubber. The gas stream exiting the venturi enters the bottom of a vertical cylinder tangentially. The droplets are removed by centrifugal force as the gas stream spirals upward to the outlet.

Advantages and Disadvantages :

Some advantages of wet scrubbers over these devices are as follows:

- Wet scrubbers have the ability to handle high temperatures and moisture.
- In wet scrubbers, flue gases are cooled, resulting in smaller overall size of equipment.
- Wet scrubbers can remove both gases and particulate matter.
- Wet scrubbers can neutralize corrosive gases.

Some disadvantages of wet scrubbers include :

- Corrosion
- The need for entrainment separation or mist removal to obtain high efficiencies
- The need for treatment or reuse of spent liquid.

Subject: Request to arrange industrial visit.

Dear Sir / Mam,

We are pleased to Request you to arrange the industrial visit for SE and TE, BE computer engineering students. The tentative date for the industrial visit is 10/12/2022 to 20/12/2022. Your company's expertise and knowledge in the area would add a great value to the one and all, especially the budding engineers of the country who require the guidance and path-breaking ideas to lead their way through the tough competition in the Global market on this day.

With your company growth and in-depth knowledge in the area, you would be expected to deliver on the "**Computer Network *and Job Opportunities in TCS***" as we are aware of your great contribution to this field of work. We look forward to your presence and guidance in making the event successful.

Industrial Visit Report to Digital Ion Zone TCS

Our Department had organized an Industrial Visit for the Students of Diploma & Degree of Computer Department to TCS along with 9 Staff Members (Prof.Y.A.Sisodia, Prof N.B.Gade,A.Adsure, Prof P.Faulsounder ,Prof R.Ghadage,Mr.jadhav A.,swapnil Satpute, Prof Walke S.)And 150 Students. The Visit was organized on 13/12/2022 at Digital Ion Zone TCS, Hadapsar, and Pune.

TCS iON Digital Exams Solution digitizes and automates end-to-end University and Board Examination Processes. It enables the secure creation and Distribution of Question Papers. The solution reduces administrative efforts and costs by automating processes such as Student registration, Exam center allocation, Hall Ticket issuance, Question Paper Logistics Planning, Exam-day Management, and Results Management.

Ion Digital Zone in Ramteki, Hadapsar, Pune is one of the leading Businesses in the Online Examination Centers, Computer Networking and Training Institutes.

The Industrial Visit was in Two Sessions:-

1. A Seminar was arranged in Two Sessions & the following Concepts were explained in brief.

- Networking Systems, Types of Network & it's Topology
- Procedure for Candidate for Examination
- Switches & Routers
- Details of TCS's iON Operating System
- Latest Trends in I.T Sectors for Fresher's as a Job Profile

2.Students were divided in Sections to visit their Server Room and their different Examination Centres.

3.Outcome :-

i. Student's Queries were solved
ii. Students got an deep acquaintance of the real time processes in Industry.
iii. Students were motivated to work in various Software Fields in Corporate.
iv. Links will be sent to Register Students for making a Career in TCS.

To,

The Manager,
Sahib Cold Storage,
MIDC, Ahmednahar.

Subject – Regarding Permission for industrial visit at your Cold storage Plant.

Respected Sir,

Shri. Chhatrapti Shivaji Maharaj College of Engineering, Ahmednagar is established in year 2011 by Ahmednagar Jilha Maratha Vidya Prasarak Samaj, Ahmednagar. The college is approved by AICTE, New Delhi, Recognized by DTE, Mumbai and affiliated to University of Pune, Pune. The college runs four branches of engineering viz. Civil Engineering, Computer Engineering, E&TC Engineering and Mechanical Engineering with intake of 60 students each.

As per the curriculum of Savitribai Phule Pune University, a visit to Cold storage Plant Under the subject of Heating, Ventilation & Air conditioning is mandatory for the student of final year Mechanical Engineering.

I kindly request you to permit our 48 Final year Mechanical Engineering student for visit to your Cold storage Plant. Our two staff members will also accompany them. You are also requested to spare technical person to give information about Cold storage Plant.

Your help in this regard is highly appreciated. Thanking you in anticipation.

M/s. SAHIB ENTERPRISES A-14/1 M.I.D.C. AHMEDNAGAR

INDUSTRIAL VISIT REPORT

Date of Visit: 10/11/2022

Name of Company: Sahib Cold Storage.

Address: Plot no 11/3, Renukanagar, MIDC, Ahmednagar, Maharashtra414001, India

Class: Final Year Mechanical

Number of students Attendee:

Name of Staff:

1) M.A.Thombare
2) R.V.Rajale

Being the second largest producer of fruits and vegetables in the world, India touches the production of approximately 260 million metric tons annually India is also the world's largest producer of milk and fruits. Still the nation witness nearly 4.6-15.9% wastage is due to lack of cold storage infrastructure.

Objective of cold storage:

- Prolonging Shelf life of fruits and vegetables.
- Temperature control
- Cost effective
- Transportation of products
- Storage for chemicals. And many more

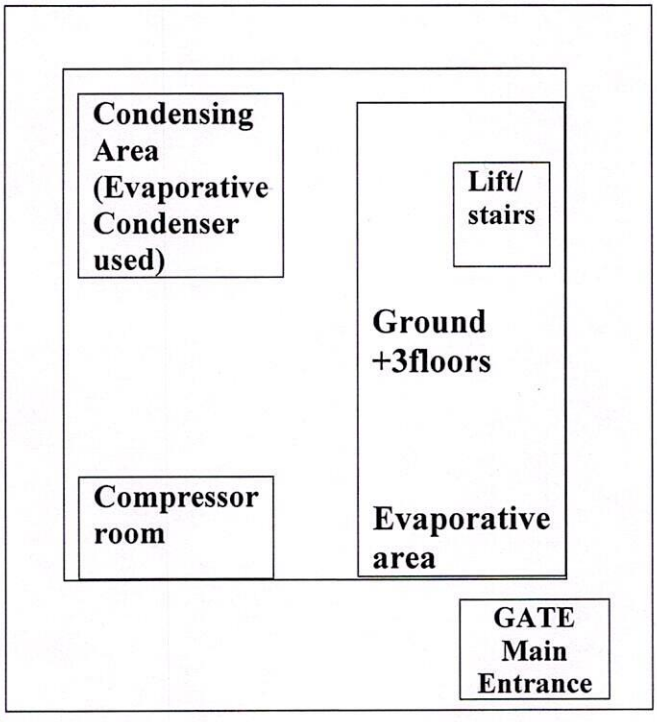

Sahib ice and cold storage in Ahmednagar, is known to satisfactorily cater to the demands of its customer base. The firm came in to existence in 2013 and has, since

Shri Chhatrapati Shivaji Maharaj College of Engineering Nepti Ahmednagar

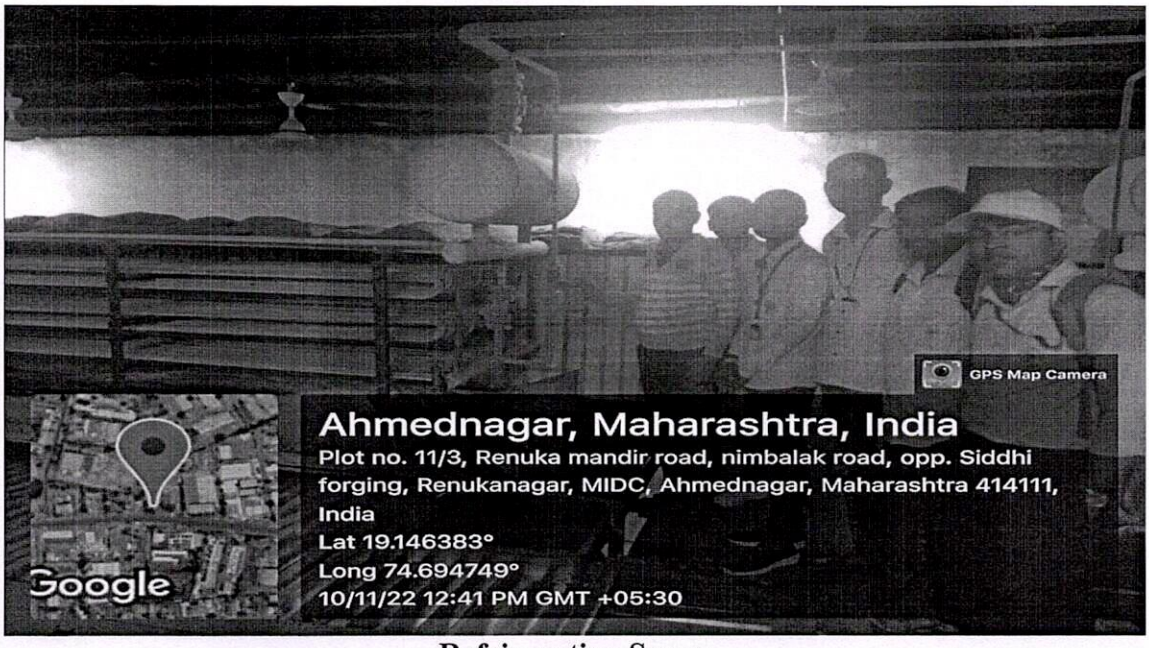

then been known name in its field. The business strives to make for a positive experience through its offerings.

Sahib cold storage is popular cold storage in Ahmednagar Maharashtra. Cold storage is a facility in which fruits and vegetables can be preserved for a longer duration. The cold storage are categorized for two types, first is used for single product and the other is for multiple products. Food item that required cold storage include fruits and vegetables, poultry and fish products, meat product etc. Mostly potato stored in the storage space in big amount generally there shelf life for storage is about 6 to 8 months. Sahib cold storage has three floors. Compressor placed at ground and evaporator, condenser is exactly besides the compressor room. In this plant medium temperature cold storage adopted which is designed for storing a variety of product at 0 to 8 degree Celsius temperature. As number of floors are there to carry goods elevators are also available. Customer centricity is at the core of Sahib Ice & cold storage.

Subject: - Invitation to be keynote speaker of technical lecture and guest of honor.

Dear Sir,

We are pleased to invite you to keynote speaker of technical lecture on **" Business & Job Opportunities in the Environment & Water Sector " and** guest of honor for **" 36th Foundation Day of IEI ALC "** scheduled on **29th November 2022** at Shri. Chhatrapati Shivaji Maharaj College of Engineering, Nepti, Ahmednagar. This lecture will be a joint effort of the IEI Local Center, Ahmednagar and SCSMCOE.

Your expertise and experience in this field will be an excellent addition to our programme, as many of our visitors will look forward to learning from your work. It is an honor to invite you to be a keynote speaker for a speech/presentation on "Business **& Job Opportunities in the Environment & Water Sector" on 29th November 2022** as we are aware of your great contribution to this field of work. You are also requested to inform the students and faculties from your organization to become a part of the lecture. We look forward to a positive response.

Thanking you.

Yours Truly

Dear Sir,

It was really a great privilege to have your presence at Shri Chhatrapati Shivaji Maharaj College of Engineering, Nepti, Ahmednagar which was held at Civil Engineering Department on **29th November 2022 at 03:00 pm**. I would like to express my gratitude for your valuable presentation on **""Business & Job Opportunities in the Environment & Water Sector""** Your valuable guidance had helped us in past and they would help us in past and they would help us in future as well. On behalf of the all the faculties of the department, I greatly appreciate yourexpert talk.

I hope for the same co-operation from you in near future course of the time.

Thanking you.

Yours Faithfully

Guest Lecture On "Business And Job Opportunities In Environment And Water Sector"

Event Title: Business and Job Opportunities in Environment and Water Sector

Date: 29th November, 2022

Venue: Savitribai Phule Seminar Hall, SCSMCOE.

Name of the Organizing Department: Civil Engineering

Sponsoring Organization: IEI, Ahmednagar Local Center & SCSMCE, Nepti.

No. of Session: 01

No. of Participant: 119

On the 29th November, 2022 the guest lecture on the topic of "Business and Job Opportunities in Environment and Water Sector" organized at Savitribai Phule Seminar Hall, SCSMCOE for all the civil engineering department students. The expert was Mr. Saraf Rajendrakumar invited for the expert talk in our institute Shree Chhatrapati Shivaji Maharaj College of Engineering, Nepti, Ahmednagar.

For the guest lecture Hon. Principal, HOD of all Departments, Faculty and students were present. Earlier Dr. Y R Kharde, Principal of the college delivered welcome address. Er Abhay Raje, Honorary Secretary introduced IEI and Ahmednagar Centre activities. Prof P G Nikam, HoD, Civil Engineering introduced the speaker. In this lecture Mr. Saraf interact with the student and provide a good certain knowledge regarding opportunities present in civil engineering. In briefly they give knowledge regarding the business and job opportunities in environment and water sector. In that they were share their huge experience in the field of environment and water sector.

As our expert was a field personal they share the detail knowledge regarding the challenges they were faced on actual site. They further provide the details, that how they were overcome from those challenges and how successfully they tackle the challenges.

In between this experience sharing, which new technologies are present in the market how that can be used in future constructions that also they inform. Also at the end they give the information about future business and job opportunities in environment and water sector.

After the all this Prof. Yewale V. V. announced the conclusion of the lecture and give vote of thank .The lecture received overwhelming response from the students.

Prof. Nikam P. G. Inroduce guest Mr. Saraf Rajendrakumar

Principal Dr. Y. R. Kharde felicitate guest Mr. Saraf Rajendrakumar

Guest Mr. Saraf Rajendrakumar address the lecture

Sub – Invitation to conduct a Expert Lecture on **"Importance of Software for Civil Engineering & Internship."**

Respected Sir,

Shri. Chhatrapti Shivaji Maharaj College of Engineering, Ahmednagar is established in year 2011 by Ahmednagar Jilha Maratha Vidya Prasarak Samaj, Ahmednagar. The college is approved by AICTE, New Delhi, Recognized by DTE, Mumbai and affiliated to Savitribai Phule Pune University, Pune. The college runs four branches of engineering viz. Civil Engineering, Computer Engineering, E&TC Engineering and Mechanical Engineering with intake of 60 students each.

As per your telephonic discussion, we request you to conduct a "Guest Lecture on **"Importance of Software for Civil Engineering & Internship."** for students on 03rd Oct. 2022.

Thanking you in anticipation.

Report on

"Guest Lecture on Importance of Softwares for Civil Engineering & Internships"

Event Title : Softwares For Civil Engineering & Internships

Date : 13th October 2022

Venue : Savitribai Phule Seminar Hall, SCSMCOE.

Name of the Organizing Department : Civil Engineering Department

Sponsoring Organization(s) : Shri Chhatrapati Shivaji Maharaj Collage Of Engineering, Nepti.

No. of Sessions : 01

No. of Participants :125

On the 13th October 2022, the expert lecture on the topic of on **" Importance of Softwares For Civil Engineering & Internships"** organized at Savitribai Phule seminar hall for SE and BE student. The expert was Er. Hitesh Lahoti invited for expert lecture in our institute Shree Chhatrapati Shivaji Maharaj Collage Of Engineering, Nepti.

For the expert lecture Hon. Principal Sir, HOD of all departments, faculty and student are present. In this lecture, Er. Hitesh Lahoti interact with the student on focus on rapidly development in Civil sector and gives the informative speech on software application in Civil engineering can be useful in various forms of Designing and Drafting. He also explain how to get free certificate of different civil softwares which are useful for build aur resume. He also told that It allows user to conceptualize ideas and building drawings to the required level of technical accuracy in Civil Engineering.

Er. Hitesh Lahoti gives details information about each and Software courses which are use in Build and development such as,

Auto CAD software – application in Civil engineering can be useful in various forms of Designing and Drafting. It allows user to conceptualize ideas and building drawings.

SketchUp – SketchUp, formerly Google Sketchup, is a 3D modeling computer program for various drawing applications such as architectural, interior design, landscape architecture, civil and mechanical engineering.

Autodesk 3ds Max – Autodesk 3ds Max, formerly 3D Studio and 3D Studio Max, is a professional 3D computer graphics program for making 3D animations, models, games, and images.

Revit Structure – Revit Structure is Autodesk's BIM software solution for structural engineering companies and structural engineers that provides a feature-rich toolset helping to drive efficient design processes in a BIM (Building Information Modelling) environment.

Staad Pro – Staad Pro is a structural analysis and design software application that is extensively used across the world. It can apply over 90 international design regulations for steel, concrete, wood, and aluminum.

He also given the information about road map for each class student for build up knowledge and certification courses. All the above information is very useful for choose in which course they can build their future career.

Notice

All the Students of S.E., T.E., B.E. Civil are hereby informed that the guest lecture is organized on **Remote Sensing and G.I.S.** by **Mr. Vaibhav Bhagwan Kashyap** from Karad, Dist Satara in Seminar hall at **11:00 am on Wednesday 10/08/2022** .

Mr. Vaibhav Bhagwan Kashyap is **M.Tech in Environmental Science and technology**, from Shivaji University, Kolhapur, Along with it, He had completed a **GIS and Remote Sensing Diploma** from Karad. He also did a patent on **Free Energy Generation and Utilization for AWG**. Also did **five project on GIS and Remote Sensing**. He is a government contractor and builder, running his own firm called Vishwakarma Construction.

The guest lecture will be on GIS and Remote Sensing. This particular lecture will focus on **implementation of GIS and Remote Sensing toward Civil engineering projects such as Analysis of landslide hazard zones, for Taxation project, Route Analysis, Urban Expansion etc.**

Subject : Invitation as a Guest Lecturer on topic "Remote Sensing and GIS"

Respected Sir,

We are pleased to invite you as a Guest Lecturer on topic **"Remote Sensing and GIS"** scheduled on **Wednesday 10/08/2022** at **11:00 am**. Your expertise and knowledge in the area would add a great value to the one and all, especially the budding engineers of the country who require the guidance and path-breaking ideas to lead their way through the tough completion in the Global market on this day.

With your vast and in-depth knowledge in the area, you would be expected to deliver on the **"Remote Sensing and GIS"** as we are aware of your great contribution to this field of work.

We look forward to your presence and guidance in making the event successful.

Thanking you.

Yours faithfully

On the 10th August 2022, the guest lecture on the topic of **"Remote Sensing and GIS"** organized at Savitribai Phule seminar hall for SE and BE student. The guest lecturer was Vaibhav Kashyap invited for guest lecture in our institute Shree Chhatrapati Shivaji Maharaj Collage of Engineering, Nepti.

For the guest lecture Hon. Principal Sir, HOD of all departments, faculty and student are present. In this lecture, Mr Vaibhav Kashyap interact with the student on focus on rapidly development and use of remote sensing and GIS in civil engineering as well as other branches of engineering and get opportunities in their career in remote sensing and GIS sector. He also explains how to use remote sensing and GIS in civil engineering field to overcome problems like urbanization and transportation, agriculture, natural resources and management, national security. He also explains applications of GIS in various Fields such as agriculture and soil, forest, biodiversity and environment, engineering and geology, regional land development, marine and oceanography, disaster management, meteorology and water. He demonstrate one of his project on GIS i.e. watershed delineation of Kolhapur district.

All the above information is very useful for activities of placement for each and every student.

"Guest Lecture On Google Certified Scholarship Program"

Event Title : Google Certified Scholarship Program

Date : 04th August 2022

Venue : Savitribai Phule Seminar Hall, SCSMCOE.

Name of the Organizing Department : Civil Department

Sponsoring Organization(s) : Shree Chhatrapati Shivaji Maharaj Collage Of Engineering, Nepti.

No. of Sessions : 01

No. of Participants :125

On the 04th August 2022, the expert lecture on the topic of **"Google Certified Scholarship Program"** organized at Savitribai Phule seminar hall for SE and BE student. The expert was Mr. Ulhas Bhale invited for expert lecture in our institute Shree Chhatrapati Shivaji Maharaj Collage Of Engineering, Nepti.

For the expert lecture Hon. Principal Sir, HOD of all departments, faculty and student are present. In this lecture, Mr. Ulhas Bhale interact with the student on focus on rapidly development in IT sector and gives the informative speech on how to other branch's student like, Civil, Mechanical, and E&TC get opportunities in their career in IT sector. He also explain how to get free google course certificate like, IT Support, Project Management, UX Design, Data Analytics, IT Automation, Digital Marketing & E Commerce. He also told that duration of above course is 100+ hour's and learning mode for all these courses are based on recorded video and assessment is based on MCQ.

Mr. Ulhas Bhale gives details information about each and every google certificate course such as,

IT Support – In IT support we can learn how to get IT specialist troubleshoot problem so computers and network run correctly.

Data Analytics – Indata analytics we can learn data analysis collect, transform and organize data in order to help make informed business decisions.

UX Designer Certificate Course – In ux designer course we can learn how to UX designers make digital and physical products easier and more enjoyable to use.

Project Management Course – In project managementcourse we can learn how to project manager ensure the project within an organization are managed and complete within maximum value.

Digital Marketing & E- Commerce – In this course we can learn how to explore entry level skill in digital marketing and E- commerce and identify the different function in this field.

He also given the information about how to apply for the scholarship and completion of the certification courses with package of each and every course. All the above information is very useful for activities of placement for each and every student.

Subject: Invitation for conducting Guest Lecture on "Current trends in IT Sector and Personality Development".

Dear Sir / Mam,

We are pleased to invite you for the Guest lecture on "Current trends in IT Sector and Personality Development" for SE, TE, BE, SY, TY students scheduled on 11 march 2023 at 12:05 pm. Your expertise and knowledge in the area would add a great value to the one and all, especially the budding engineers of the country who require the guidance and path-breaking ideas to lead their way through the tough completion in the Global market on this day.

With your vast and in-depth knowledge in the area, you would be expected to deliver on the "Current trends in IT Sector and Personality Development" as we are aware of your great contribution to this field of work. We look forward to your presence and guidance in making the event successful.

Thanking you.

Received.
Kalhapure.

Yours faithfully,

Dear Mam,

It was really a great privilege to have your presence at Shri Chatrapati Shivaji Maharaj College of Engineering,Ahmednagar which was held at Computer Engineering Department on 09 March 2023 at 2:30 pm. I would like to express my gratitude for your valuable presentation on **"Current Trends In IT Sector and Personality Development "** Your valuable guidance had helped us in past and they would help us in future as well. On behalf of the all the faculties of the department, I greatly appreciate your expert talk.

I hope for the same co-operation from you in near future course of the time.

Thanking you.

Yours faithfully,

Guest Lecture Report

In our Computer Engineering department we are organize expert lecture on "Current trends in IT Sector and Personality Development" which is conducted by Sneha Kolhapure, Sagar Sonawale, Shradha Shirole .This lecture conducted on 11 March 2023 at 12.05 pm ,in Online Google meet Platforms. Experts guided our students properly. They also guide students about what are the Current trends in IT Sector and Importance of personality development, and how it is helpful. They were taking very nice lecture and students were satisfied. That was very amazing lecture. It also helpful to our students in their future.

Following Point is discussed in lecture

- What is Current trends in IT Sector and Personality Development
- Different services of IT sector
- Types of Current trends
- Application
- IT Sector opportunity for the student

Letter of Thanks

To,
Mr. Adarsh Gangawane,
PRM Software Solution,
Pune.

Dear Adarsh,

It was really a great privilege to have your presence at Shri. Chhatrapati Shivaji Maharaj College of Engineering which was held at Savitribai Phule Seminar Hall organized by Mechanical Engineering Student Association for all students on 17th April 2023 at 01:00 pm. I would like to express my gratitude for your valuable speech and presentation on **"Developing the Art of Living for Purpose Full Life".** Your valuable guidance had helped us in past and they would help us in future as well. On behalf of the all the faculties of the department, I greatly appreciate your expert talk.

I hope for the same co-operation from you in near future course of the time.

Thanking you.

Yours faithfully,

17-04-2023

***Abstract*—A growth in consumers of current Web Applications may be attributed in large part to the improved affordability of the internet platform, which has led to a surge in users across a wide range of internet networks in current history. This data can be put to many good uses, but it really shines when applied to machine learning and artificial intelligence systems. Machine learning algorithms are additional essential and basic technique for gaining in-depth understanding of a topic or event of interest. Machine-learning algorithms perform best with massive amounts of data. Multiple solutions for providing safe ways to transfer data have indeed been investigated in this research. These methods have indeed been instrumental in assisting us in developing a safe, reliable, and productive system for managing information flows and accessibility. Therefore, there is a need for an effective and useful mechanisms that can allow for the effective sharing of the data as well as incorporate reliability and accountability to the entire system. This is achieved through the use of the reward and penalty scheme that is enabled through the use of a judgement module that is integrated with the distributed blockchain framework. The approach has been subjected to extensive tests that have been crucial in the realization of the superiority of the approach in achieving effective and accountable data sharing through blockchain.**

Keywords— Blockchain Framework, Reward and Penalty Scheme, Integrity Evaluation, Crowd Sourcing Data.

I. INTRODUCTION

Blockchain's possibilities for information exchange, trust-building, and permissions management has been the subject of several additional research efforts. While some research has been conducted on data sharing, it is often limited to one phase or either facet of the process, or it takes a stance in the debate by focusing on the issues of just one party (in this case, data proprietors). Blockchain technology may function as a trusted connection point for data amongst data owners and consumers. Data trust frameworks may benefit from the blockchain's decentralized, transparent, and dependable characteristics.

Sung-Jung Hsiao [1] constructs a five-layer architecture of proper inventory management flow using blockchain, consisting of the organization tier, the blockchain specification component, the internet protocol, the cooperation surface, as well as the network protocol. The approach defines the compositional and database structure characteristics of primary and secondary information resources in the distribution chain, and then provides a block capturing methodology for multi-sensor relevant data from both within and beyond the distribution chain. Cryptographic hash indications serve as the glue that holds the blockchain together. Relying on all this, a digital connection framework is presented for constructing blockchain-related data, and the mechanism of generating digital linkages is examined via the lens of a concrete case.

Zhen Pang [2] argues that a system for exchanging electronic health records is crucial so that individuals get effective and thorough care. Through a formalised system, clinics are required to share patient data with one another, which is beneficial to the whole health care industry. There is a lot of sensitive data in the EHR, thus it is important to take precautions while exchanging records. The suggested approach uses together on including off storage, guaranteeing the reliability of all information. This study employs a strategy for encrypting text that can be searched using several phrases, which improves both speed and precision. As part of the consensus mechanism, it is acceptable tolerating and eventually capturing the Byzantine node. It is proposed that a network configuration monitoring and anomaly based isolation technique be added to the PBFT compromise method to make it more secure. Consequently, the proposed technique may minimise the Byzantine node's effect on the decentralized network by designating a single point as the primary server.

Section 2 of this research article presents an analysis of the relevant literature; Section 3 explains the research approach; Section 4 discusses the experimental assessments; and Section 5 closes with suggestions for further study in the future.

II. RELATED WORKS

When it comes to fitness statistics, May Alhajri [3] explains how there are a number of reasons to be wary about giving it out to other entities. By giving users more say over how their activity information is used, this research hopes to alleviate some of the privacy-related concerns that have been raised about activity trackers. To address concerns about data confidentiality, the researchers developed a blockchain-based adaptive authorization method. The proposed framework, acceptance criteria, and formalized verification architecture

Authorized licensed use limited to: California State University Sacramento. Downloaded on June 28,2023 at 18:38:33 UTC from IEEE Xplore. Restrictions apply.

are the main deliverables of the developed framework. The security modelling methodology instrument and the established blockchain hypotheses are used to assess the shown artefacts as well. Accordingly, the results of the assessment of the vulnerability modelling technique demonstrate that the system accomplishes all of our intended purposes.

As Ying Gao and others [4,5,6,7,8] explained, blockchain coupled Identification driven proxy reencryption may be used to provide a safe data exchange paradigm for software-defined network empowered Ubiquitous cloud technology. For regional traffic relaying, a Software Defined Network deployment was made. The identity-based proxy reencryption system was developed to safely share the encrypted document credentials among stakeholders and other parties after they were exported to a separate remote server. Users may interface with the public ledger in several ways, including browsing for and modifying entries on the ledger, via uploading cryptographic keys to the ledger and using smart contracts. In addition to the excellent performance of the planned smart contracts, experimental findings show that the suggested architecture performs very effectively.

III. Proposed Methodolgy

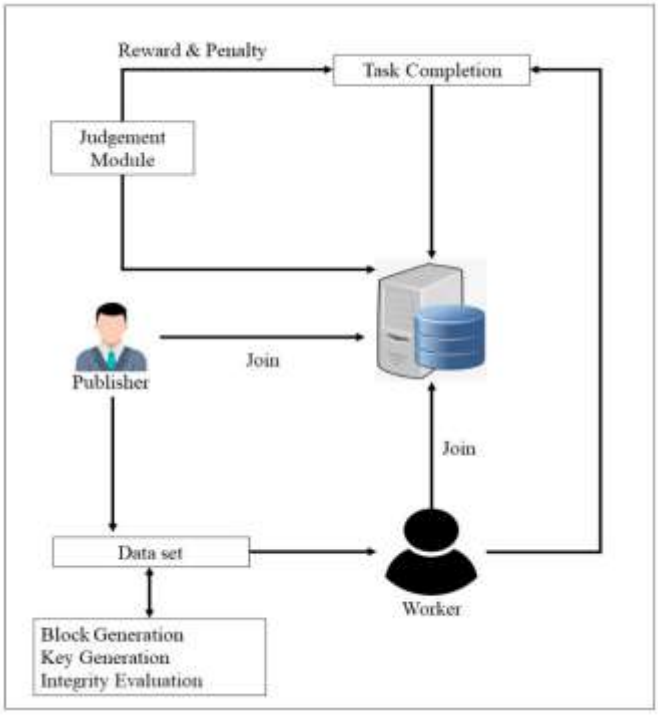

Figure 1: Proposed Methodology

The proposed methodology for the purpose of achieving Trustworthy Freelancing Crowdsourcing that is reliable and accountable in nature has been successfully expanded in the figure 1 above and the steps taken to achieve this system are elaborated below.

Step 1: Registration and Activation of the System – The aforementioned approach has been successfully created for the goal of being implemented on a variety of machines. This strategy may also be implemented on a single computer by simulating the behavior of the two additional actors. This is because the system calls for three distinct responsibilities to be filled: first, the decentralized server; second, the job supplier; and third, the worker. The system administrator is responsible for the maintenance of the distributed server via the creation of a graphical front interface which is achieved through the deployment of the swings platform which is established on the programming language Java.

This dynamic user interface is used by both the task provider and the employees in order to facilitate the registration process for both parties involved in the transaction. Prior to getting allowed to use the service, the employees and attach suppliers must first register by providing information about themselves and respective appropriate qualities. Name, email address, user name, and password are the identifiers that are taken into account throughout the registration process. Also evaluated is the cellular phone contact. After the user's information has been checked for accuracy and approved, the next step is the development of a signature key in conjunction to the relevant enrollment for the role that was selected.

The relevant users may get permitted admission into the program for the intention of enforcing the regulations by using the one-of-a-kind username and password that they were given at the moment of enrollment. This information was supplied to the users. The user attributes that are relevant to the interaction are employed to build a hash key, that is then put into practice in the process of selecting arbitrary characters for inclusion in the formation of the signature key.

Step 2: Uploading Task and RCC encryption – The data supplier or publisher makes use of the platform for the objective of transferring the job and the relevant data into the decentralized system for the employees or the data recipients. The methodology of crowdsourcing may be successfully put into action by the job publisher in the form of their delegation of the assignment to the crowdsourced employees. Both the employees and the publisher are interested in obtaining the material, but the publisher particularly needs people who are interested in the job. This makes it possible to realize the crowdsourcing infrastructure in a way that is simultaneously successful and beneficial, which in turn can enhance each of the parties that are engaged. Because of this, the model involves a publisher in order to transmit the job along with all of its information associated to the worker via the usage of a distributed server.

Text files containing the job that is currently posted by the publisher are the ones that are posted to the decentralized system. This text file has a variety of different features, including the title of the job, a summary of the task, the cost of the assignment, and the required security contribution from the worker. This job, which was sent to the decentralized server for posting in the form of a text document, was successfully completed. Even before assignment can be uploaded, necessary for it to be adequately encrypted. This will guarantee that the security is not compromised.

The technique named as the reverse circle cipher is employed in order to achieve the goal of encryption. In order to accomplish the job of transferring the textual file that contains the assignment to the platform in the form of a path of the file as an input. The scheme will go along the input path, and it will get the appropriate text file from the location that has been provided. The document that was retrieved is successfully examined, and the system extracts the different properties and features of the file before converting them into string format. This is helpful because it enables a system to properly parse strings and take advantage of the data for encryption and additional treatment.

Authorized licensed use limited to: California State University Sacramento. Downloaded on June 28,2023 at 18:38:33 UTC from IEEE Xplore. Restrictions apply.

The signature key that was generated during the process of registering the actors is the one that is used for encryption purposes. The processing of the key involves removing the characters from the key and transforming those letters into the corresponding ASCII numbers for those characters. The resulting number is obtained by adding all of these ASCII codes combined and then summing the total. The addup number is then found by modifying this quantity by 20, which yields the outcome. This value is very important since it is put to good application in the field order to successfully achieve the encryption. In the beginning, the string is split up into chunks by using the equation 1 that is shown underneath.

$$\boldsymbol{f(RSB)} = \int_0^n SB(i) \Rightarrow SB'(i) \quad \text{_____} (1)$$

Where,

R_{SB}= Rotated Division List
n= Number of blocks
S_{Bi}=i^{th} Block
S_{Bi}'=Rotated i^{th} Division

The task provider creates blocks out of the resulting string that is generated by extracting the elements of the text document that is supplied to the user. Each of the following blocks has 10 letters, and each of these blocks is saved separately in the format of a list. Whenever the characters inside the block are turned in accordance with the block's index, the blocks themselves go through a process of rotation. Modifying the index of such block by ten allows for the desired amount of revolutions to be accomplished.

After the blocks have been rotated, the ASCII codes of the letters contained within these blocks will be retrieved and used. After that, the ASCII code of the letters is added to the value that was taken first from signature key inside the step preceding it. This produces a distinct ASCII code for the consequent block that is then allocated to and substitutes the letters in the block, culminating in optimal encryption. These is shown in equation 2 beneath.

$$\boldsymbol{f(ESB)} = \int_0^n \sum_0^k SB(i) \ MOD \ Ky \Rightarrow ESBi \quad \text{_____} (2)$$

Where,

E_{SB}= Encrypted Block
n= Number of blocks
k= Numbers of Character in the block
S_{Bi}=i^{th} Block
K_y= Cipher Key
E_{SBi}=Encrypted Block

This resulting list is successfully used to build the text document by recombining the blocks, and the encrypted text document that is produced as a consequence is posted into the decentralized server using socket programming.

Step 3: Blockchain Creation and Integrity Maintenance – This represents the most important process of the procedure that has been described. This kind is used so that the integrity of the information that is posted into the distributed server may be maintained. The encrypted file that was collected from the preceding step in this method is saved onto the distributed server so that it may be accessed when necessary. The first thing that is done when we get to this stage of the process is a verification to see the presence of any documents in the directory that is being utilized for the store.

If it is determined that the path does not include any items, then the relevant file will be created in the location, and the elements of such a document will be retrieved. If somehow the path is found to be blank, then only the The md5 hashing component is used so that a hashing operation can be carried out on the information of the files that are located in the specified folder. In order to get the information contained within the file, you must first divide the contents and then generate the relevant hash key. The hash key that is created based on the contents of the file is used in the formation of the head key, which is performed with the help of algorithm 1. This master key is of great assistance in the production of the blockchain. This represents the head key that has been saved into the mysql database in order to perform subsequent integrity checks and evaluations.

If, on the other hand, there are already files on the digital server and the destination is not empty, then the data that is stored on the server has to have its integrity checked. This is because there should always be an efficient integrity maintenance performed each time a file is posted into the distributed server. The reason for this is due to the fact that this is a need. Therefore, in order to perform an integrity check on the files that have been saved, the contents of the files must be extracted and put through an md5 hashing method assessment before the results can be interpreted. The hash key of the files is then passed to the first algorithm for the purpose of creating the head key.

The algorithm 1 resultant head key is then used for the purpose of concatenation with the file contents of the following file. This is done after the resultant head key has been obtained. The contents of this file are afterwards and repeatedly hashed using the MD5 algorithm, which is followed by the formation of the had key. This procedure is carried out in an endless loop for each and every one of the files that are being uploaded to the decentralized server. After this, the head key of the final file, which is the terminal ki, is accomplished.

The terminal key that was previously saved in the database table is then compared to the resulting terminal key that was produced as a consequence of this complete operation that was carried out on the files that were uploaded into the distributed server. The server is considered to be insecure if the terminal key that is now stored in the database does not match the terminal key that is created during the whole of the operation. The avalanche effect is shown by the difference in the terminal key. The avalanche effect is a reliable indication that the data have been tampered with, which ultimately results in the distributed server becoming corrupted. Due to the fact that this distributed server's integrity has been compromised, the fresh data will not be posted onto it.

If the terminal key that was created coincides with the terminal key that was saved in the database, this demonstrates that the integrity of the distributed server is being effectively maintained, since there is no sign of an avalanche effect. This suggests that the distributed server has not been tampered with and that it is safe for us to continue to upload data to it in the future since the integrity of the data that is kept on the server is properly preserved

Authorized licensed use limited to: California State University Sacramento. Downloaded on June 28,2023 at 18:38:33 UTC from IEEE Xplore. Restrictions apply.

As soon as it is established that the distributed server has not compromised its security, the newly created file may be successfully submitted to the server. To accomplish this, the information of each of the documents that are now available are extracted, and their head keys are calculated using the hash key. The blockchain cannot be created without these head keys being present first. The combination among these head keys and the hash key is can then use to great advantage in order to accomplish the goal of obtaining the terminal key. The integrity assessment of the collected information that is being saved on the distributed server is determined, in large part, by the terminal key, regarded as the most important key of all. This terminal key is successfully kept within the databases for the feature assessments of authenticity of the information stored in the server in addition to when the subsequent upload a document is now being conducted. This is done during the subsequent upload a document is now being conducted. The following algorithm 3, which explains the blocks formation operation in its whole, may be seen below.

ALGORITHM 3: Blockchain Formation

```
//Input : File list F_LST
//Output: Terminal Key TERM_KEY
blockchainFormation(F_LST)
1: Start
2: TERM_KEY =" "
3:   for i=0 to size of F_LST
4:     Path= F_LST [i]
5:     F_CONT= getFileContent(Path)
6:     F_CONT = F_CONT + TERM_KEY
7:     H_K=MD5 (F_CONT)
8:     TERM_KEY = signatureKey (H_K)
9:   end for
10:    return TERM_KEY
11: Stop
```

Step 4: Task Accessing – The worker uses the authorized credentials that they established at the moment of enrollment during the initial phase of this method in order to get access to the job. After the worker's credentials have been verified, the system will offer a search tool so that they may find the appropriate job that has been submitted. In order to carry out the search process, you will need to enter the appropriate query through into search field that is associated with the kind of data that is requested. Well before search is executed, the incoming query is "preprocessed" by having its format changed to a string and by going through a conversion procedure. The procedures that are mentioned below will successfully accomplish the preprocessing for you.

Special Symbol Removal - The special symbols used in the English language give the grammatical structures. These unique symbols are of no utility to the search process, and they may be removed without causing any complications at all. As a result, the very first phase of this preparation procedure is removing any special symbols that may have been included in the user's query.

Tokenization – This represents one of the most important aspects in the preprocessing technique, because it has a discernible bearing on how the system is put into action. This is because tokenization divides the string into sections depending on the words inside the string, which ultimately results in the string being converted into a well-indexed string.

Stopword Removal - In the English language, stop words are phrases that are utilized to offer a rhythm to the spoken vocabulary in addition to providing an appropriate connection to various phrases. These words may also be removed to make the language more concise. If you remove this item from the input question, it will not affect the meaning in any way, since it is mostly concerned with aesthetics.

One example that may be used to illustrate stop words is the phrase "going to play," which, after passing through this stage of the preprocessing, gets transformed into the string "go play." This really is one way to explain stop words. This particular input string contains a stop word with in form of the word "to," the removal of which doesn't affect the interpretation of the phrase in any way.

Stemming – The vast majority of certain other terms in the English vocabulary are produced from respective parent terms by attaching a variety of suffixes to the end of the stems of those words. This is accomplished so that the grammatical constructions of the words that are being employed may be distinguished from one another. The procedure of stemming involves converting individual words towards their corresponding parent terms in order to create an appropriate enhancement in the interpretation of the data as a result of the decreased size of the individual words.

For instance, the word "going" may be shortened to "go" by successfully substituting the letter combination "ing" and therefore lowering the overall size of the term. By following these steps, the processing time may be cut down significantly yet the meaning of the word is not altered in any way.

Once the query has been preprocessed, it is sent to the system, which starts a linear search for said retrieval of the appropriate task based on the entered query.

Step 5: Reward, Penalty assignment through Entropy and Decision Tree – Only after job was successfully uploaded into the platform by the task provider, the worker is now capable of accessing this task using the search strategy that was illustrated before. When logging onto the system, the worker is required to submit the appropriate details in order to complete the authentication process. After these credentials have been verified, the worker will have accessibility to the job that has been made available by the task publisher. Prior to the functional assignment of the job, a smart contract will be established between both the worker as well as the task publisher.

The encrypted task that was supplied by the task provider can indeed be successfully decoded at the distributed server through implementation of this smart contract. After that, the job can be re-encrypted through the implementation of a combined effect of signature keys belonging to both the worker as well as the task provider, and it will then be supplied to the worker.

Because of this, we know that only the appropriate worker may execute the job and successfully decode the information. Because of the smart contract, this ensures that perhaps the worker in question is the only one who can see the job that has been published by the task provider. If the worker attempts to communicate this information with yet another individual, the information can be decrypted effectively because it is

Authorized licensed use limited to: California State University Sacramento. Downloaded on June 28,2023 at 18:38:33 UTC from IEEE Xplore. Restrictions apply.

encrypted through the implementation of a conjunction of keys, which the worker has only access to one key. If the worker continues to try to share this information with some other individual, the data cannot be decrypted effectively. If the employee makes an attempt to engage in unethical behavior, the task provider will be able to efficiently and simply identify this behavior.

In the event that any unethical behavior is discovered, the system of reward and punishment will be activated, which may have repercussions for the worker's level.

This distributed transparent and secure data vending platform recognizes a considerable increase in dependability and consistency as a result of the implementation of the decision making approach's if-then constraints, which determine whether the worker should get a reward or a penalty for their performance.

IV. Using the Template

After The research framework for an appropriate Trustworthy Freelancing Crowdsourcing strategy through the application of the blockchain based distributed approach has indeed been accomplished in Java programming language through the deployment of the NetBeans development environment (IDE). This strategy was developed using a laptop that has a storage capacity of 500 gigabytes, a memory capacity of 4 gigabytes, and an Intel i5 central processing unit (CPU). Windows was utilized as the operating system. The MySQL database administration is used in order to accomplish the goal of satisfying the necessity for a database.

The suggested technique has been subjected to in-depth analysis to determine how well it performs in relation to a wide range of performance measures. The process that will be followed during the assessment is shown in the following section.

4.1 Encryption and Decryption Time performance

The data that is being transferred into the decentralized server may be effectively secured via the use of the suggested approach, which makes use of encryption and decryption methods. Quantification of the effectiveness of this strategy is required, and this may be done by following the process that is provided further down. The table that follows contains a tabulation of the time that was required encrypting and decrypting the data based on the different quantities of characters that were employed.

Number of Characters	Encryption Time (in ms)	Decryption Time (in ms)
15	4	3
1808	15	17
2805	33	32
3101	46	54
5312	52	59
6103	64	62
6680	67	63
8159	77	78
9521	82	79
9998	96	98

Table 1: Encryption and Decryption time performance

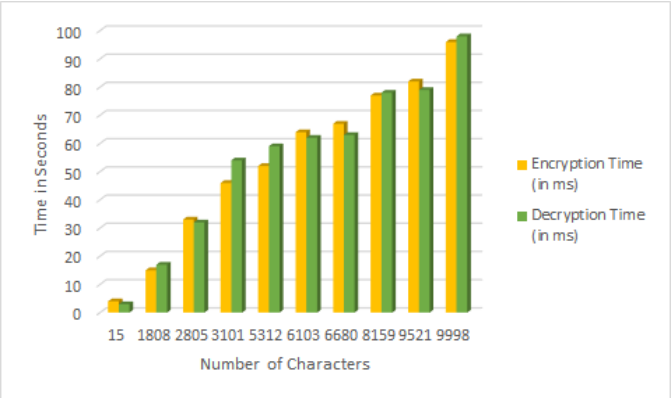

Figure 2: Encryption and Decryption Time

The tabular data were successfully retrieved for the intention of visual analysis in the bar charts which was then presented in the aforementioned figure 2. It should be obvious that the amount of time necessary for the encryption and decryption operation is indeed not exactly related to the number of characters that are supplied. This happens as a result of the premise that the cryptographic procedure that is employed for this method, which is referred to as the Reverse Circle Cipher, is designed and executed in a precise manner. In light of this, the execution of this strategy is quite successful, as evidenced by the performance metrics.

V. Conclusion and Future Scope

The proposed methodology for the purpose of achieving improved data sharing that is reliable and accountable in nature has been successfully expanded in this research article. The proposed approach achieves an effective framework that allows the data providers to securely provide the data to the data requestors or the workers. This is crucial as there are instances of data misuse and manipulation that can cost the data provider expensively. Therefore, this approach initiates with the data publisher and worker joining the system through the creation of the appropriate login credentials by registration. The both actors can now utilize these credentials to gain access to the system by performing login. The publisher then provides the system with the dataset which is first utilized for block generation, key generation to achieve the blockchain. The data is then transferred to the worker that performs the task which is then subjected to the judgement module by the system. The judgement module also performs the integrity evaluation which is then utilized for providing a reward to the worker or a penalty. This approach has been tested for its performance through the use of experimentation which yielded suitable results.

This method can be achieved on a cloud infrastructure for real-time application, which is one of the potential future avenues for this field of study.

***Abstract*—A growth in consumers of current Web Applications may be attributed in large part to the improved affordability of the internet platform, which has led to a surge in users across a wide range of internet networks in current history. This data can be put to many good uses, but it really shines when applied to machine learning and artificial intelligence systems. Machine learning algorithms are additional essential and basic technique for gaining in-depth understanding of a topic or event of interest. Machine-learning algorithms perform best with massive amounts of data. Multiple solutions for providing safe ways to transfer data have indeed been investigated in this research. These methods have indeed been instrumental in assisting us in developing a safe, reliable, and productive system for managing information flows and accessibility. Therefore, there is a need for an effective and useful mechanisms that can allow for the effective sharing of the data as well as incorporate reliability and accountability to the entire system. This is achieved through the use of the reward and penalty scheme that is enabled through the use of a judgement module that is integrated with the distributed blockchain framework. The approach has been subjected to extensive tests that have been crucial in the realization of the superiority of the approach in achieving effective and accountable data sharing through blockchain.**

Keywords— Blockchain Framework, Reward and Penalty Scheme, Integrity Evaluation, Crowd Sourcing Data.

I. INTRODUCTION

Blockchain's possibilities for information exchange, trust-building, and permissions management has been the subject of several additional research efforts. While some research has been conducted on data sharing, it is often limited to one phase or either facet of the process, or it takes a stance in the debate by focusing on the issues of just one party (in this case, data proprietors). Blockchain technology may function as a trusted connection point for data amongst data owners and consumers. Data trust frameworks may benefit from the blockchain's decentralized, transparent, and dependable characteristics.

Sung-Jung Hsiao [1] constructs a five-layer architecture of proper inventory management flow using blockchain, consisting of the organization tier, the blockchain specification component, the internet protocol, the cooperation surface, as well as the network protocol. The approach defines the compositional and database structure characteristics of primary and secondary information resources in the distribution chain, and then provides a block capturing methodology for multi-sensor relevant data from both within and beyond the distribution chain. Cryptographic hash indications serve as the glue that holds the blockchain together. Relying on all this, a digital connection framework is presented for constructing blockchain-related data, and the mechanism of generating digital linkages is examined via the lens of a concrete case.

Zhen Pang [2] argues that a system for exchanging electronic health records is crucial so that individuals get effective and thorough care. Through a formalised system, clinics are required to share patient data with one another, which is beneficial to the whole health care industry. There is a lot of sensitive data in the EHR, thus it is important to take precautions while exchanging records. The suggested approach uses together on including off storage, guaranteeing the reliability of all information. This study employs a strategy for encrypting text that can be searched using several phrases, which improves both speed and precision. As part of the consensus mechanism, it is acceptable tolerating and eventually capturing the Byzantine node. It is proposed that a network configuration monitoring and anomaly based isolation technique be added to the PBFT compromise method to make it more secure. Consequently, the proposed technique may minimise the Byzantine node's effect on the decentralized network by designating a single point as the primary server.

Section 2 of this research article presents an analysis of the relevant literature; Section 3 explains the research approach; Section 4 discusses the experimental assessments; and Section 5 closes with suggestions for further study in the future.

II. RELATED WORKS

When it comes to fitness statistics, May Alhajri [3] explains how there are a number of reasons to be wary about giving it out to other entities. By giving users more say over how their activity information is used, this research hopes to alleviate some of the privacy-related concerns that have been raised about activity trackers. To address concerns about data confidentiality, the researchers developed a blockchain-based adaptive authorization method. The proposed framework, acceptance criteria, and formalized verification architecture

Authorized licensed use limited to: California State University Sacramento. Downloaded on June 28,2023 at 18:38:33 UTC from IEEE Xplore. Restrictions apply.

are the main deliverables of the developed framework. The security modelling methodology instrument and the established blockchain hypotheses are used to assess the shown artefacts as well. Accordingly, the results of the assessment of the vulnerability modelling technique demonstrate that the system accomplishes all of our intended purposes.

As Ying Gao and others [4,5,6,7,8] explained, blockchain coupled Identification driven proxy reencryption may be used to provide a safe data exchange paradigm for software-defined network empowered Ubiquitous cloud technology. For regional traffic relaying, a Software Defined Network deployment was made. The identity-based proxy reencryption system was developed to safely share the encrypted document credentials among stakeholders and other parties after they were exported to a separate remote server. Users may interface with the public ledger in several ways, including browsing for and modifying entries on the ledger, via uploading cryptographic keys to the ledger and using smart contracts. In addition to the excellent performance of the planned smart contracts, experimental findings show that the suggested architecture performs very effectively.

III. Proposed Methodolgy

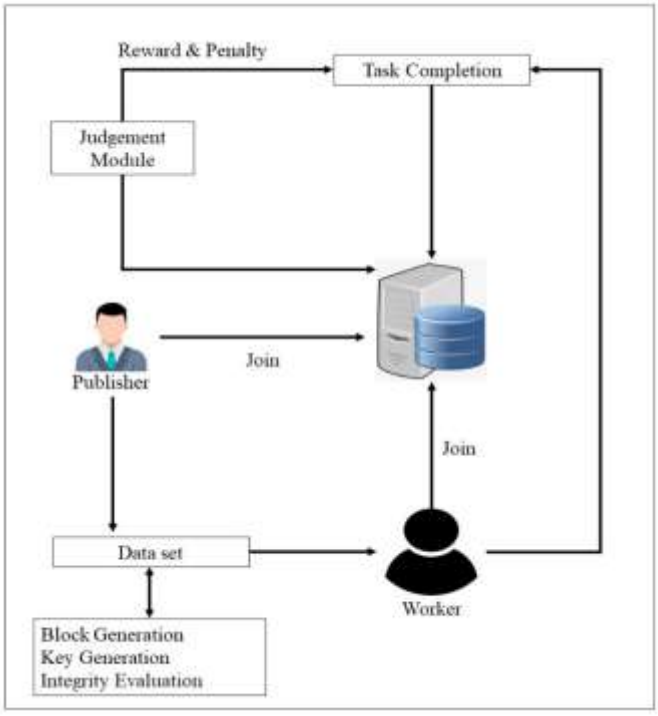

Figure 1: Proposed Methodology

The proposed methodology for the purpose of achieving Trustworthy Freelancing Crowdsourcing that is reliable and accountable in nature has been successfully expanded in the figure 1 above and the steps taken to achieve this system are elaborated below.

Step 1: Registration and Activation of the System – The aforementioned approach has been successfully created for the goal of being implemented on a variety of machines. This strategy may also be implemented on a single computer by simulating the behavior of the two additional actors. This is because the system calls for three distinct responsibilities to be filled: first, the decentralized server; second, the job supplier; and third, the worker. The system administrator is responsible for the maintenance of the distributed server via the creation of a graphical front interface which is achieved through the deployment of the swings platform which is established on the programming language Java.

This dynamic user interface is used by both the task provider and the employees in order to facilitate the registration process for both parties involved in the transaction. Prior to getting allowed to use the service, the employees and attach suppliers must first register by providing information about themselves and respective appropriate qualities. Name, email address, user name, and password are the identifiers that are taken into account throughout the registration process. Also evaluated is the cellular phone contact. After the user's information has been checked for accuracy and approved, the next step is the development of a signature key in conjunction to the relevant enrollment for the role that was selected.

The relevant users may get permitted admission into the program for the intention of enforcing the regulations by using the one-of-a-kind username and password that they were given at the moment of enrollment. This information was supplied to the users. The user attributes that are relevant to the interaction are employed to build a hash key, that is then put into practice in the process of selecting arbitrary characters for inclusion in the formation of the signature key.

Step 2: Uploading Task and RCC encryption – The data supplier or publisher makes use of the platform for the objective of transferring the job and the relevant data into the decentralized system for the employees or the data recipients. The methodology of crowdsourcing may be successfully put into action by the job publisher in the form of their delegation of the assignment to the crowdsourced employees. Both the employees and the publisher are interested in obtaining the material, but the publisher particularly needs people who are interested in the job. This makes it possible to realize the crowdsourcing infrastructure in a way that is simultaneously successful and beneficial, which in turn can enhance each of the parties that are engaged. Because of this, the model involves a publisher in order to transmit the job along with all of its information associated to the worker via the usage of a distributed server.

Text files containing the job that is currently posted by the publisher are the ones that are posted to the decentralized system. This text file has a variety of different features, including the title of the job, a summary of the task, the cost of the assignment, and the required security contribution from the worker. This job, which was sent to the decentralized server for posting in the form of a text document, was successfully completed. Even before assignment can be uploaded, necessary for it to be adequately encrypted. This will guarantee that the security is not compromised.

The technique named as the reverse circle cipher is employed in order to achieve the goal of encryption. In order to accomplish the job of transferring the textual file that contains the assignment to the platform in the form of a path of the file as an input. The scheme will go along the input path, and it will get the appropriate text file from the location that has been provided. The document that was retrieved is successfully examined, and the system extracts the different properties and features of the file before converting them into string format. This is helpful because it enables a system to properly parse strings and take advantage of the data for encryption and additional treatment.

Authorized licensed use limited to: California State University Sacramento. Downloaded on June 28,2023 at 18:38:33 UTC from IEEE Xplore. Restrictions apply.

The signature key that was generated during the process of registering the actors is the one that is used for encryption purposes. The processing of the key involves removing the characters from the key and transforming those letters into the corresponding ASCII numbers for those characters. The resulting number is obtained by adding all of these ASCII codes combined and then summing the total. The addup number is then found by modifying this quantity by 20, which yields the outcome. This value is very important since it is put to good application in the field order to successfully achieve the encryption. In the beginning, the string is split up into chunks by using the equation 1 that is shown underneath.

$$\boldsymbol{f(RSB)} = \int_0^n SB(i) \Rightarrow SB'(i) \quad _____ (1)$$

Where,

R_{SB}= Rotated Division List
n= Number of blocks
S_{Bi}=i^{th} Block
S_{Bi}'=Rotated i^{th} Division

The task provider creates blocks out of the resulting string that is generated by extracting the elements of the text document that is supplied to the user. Each of the following blocks has 10 letters, and each of these blocks is saved separately in the format of a list. Whenever the characters inside the block are turned in accordance with the block's index, the blocks themselves go through a process of rotation. Modifying the index of such block by ten allows for the desired amount of revolutions to be accomplished.

After the blocks have been rotated, the ASCII codes of the letters contained within these blocks will be retrieved and used. After that, the ASCII code of the letters is added to the value that was taken first from signature key inside the step preceding it. This produces a distinct ASCII code for the consequent block that is then allocated to and substitutes the letters in the block, culminating in optimal encryption. These is shown in equation 2 beneath.

$$\boldsymbol{f(ESB)} = \int_0^n \sum_0^k SB(i) \ MOD \ Ky \Rightarrow ESBi \quad _____ (2)$$

Where,

E_{SB}= Encrypted Block
n= Number of blocks
k= Numbers of Character in the block
S_{Bi}=i^{th} Block
K_y= Cipher Key
E_{SBi}=Encrypted Block

This resulting list is successfully used to build the text document by recombining the blocks, and the encrypted text document that is produced as a consequence is posted into the decentralized server using socket programming.

Step 3: Blockchain Creation and Integrity Maintenance – This represents the most important process of the procedure that has been described. This kind is used so that the integrity of the information that is posted into the distributed server may be maintained. The encrypted file that was collected from the preceding step in this method is saved onto the distributed server so that it may be accessed when necessary. The first thing that is done when we get to this stage of the process is a verification to see the presence of any documents in the directory that is being utilized for the store.

If it is determined that the path does not include any items, then the relevant file will be created in the location, and the elements of such a document will be retrieved. If somehow the path is found to be blank, then only the The md5 hashing component is used so that a hashing operation can be carried out on the information of the files that are located in the specified folder. In order to get the information contained within the file, you must first divide the contents and then generate the relevant hash key. The hash key that is created based on the contents of the file is used in the formation of the head key, which is performed with the help of algorithm 1. This master key is of great assistance in the production of the blockchain. This represents the head key that has been saved into the mysql database in order to perform subsequent integrity checks and evaluations.

If, on the other hand, there are already files on the digital server and the destination is not empty, then the data that is stored on the server has to have its integrity checked. This is because there should always be an efficient integrity maintenance performed each time a file is posted into the distributed server. The reason for this is due to the fact that this is a need. Therefore, in order to perform an integrity check on the files that have been saved, the contents of the files must be extracted and put through an md5 hashing method assessment before the results can be interpreted. The hash key of the files is then passed to the first algorithm for the purpose of creating the head key.

The algorithm 1 resultant head key is then used for the purpose of concatenation with the file contents of the following file. This is done after the resultant head key has been obtained. The contents of this file are afterwards and repeatedly hashed using the MD5 algorithm, which is followed by the formation of the had key. This procedure is carried out in an endless loop for each and every one of the files that are being uploaded to the decentralized server. After this, the head key of the final file, which is the terminal ki, is accomplished.

The terminal key that was previously saved in the database table is then compared to the resulting terminal key that was produced as a consequence of this complete operation that was carried out on the files that were uploaded into the distributed server. The server is considered to be insecure if the terminal key that is now stored in the database does not match the terminal key that is created during the whole of the operation. The avalanche effect is shown by the difference in the terminal key. The avalanche effect is a reliable indication that the data have been tampered with, which ultimately results in the distributed server becoming corrupted. Due to the fact that this distributed server's integrity has been compromised, the fresh data will not be posted onto it.

If the terminal key that was created coincides with the terminal key that was saved in the database, this demonstrates that the integrity of the distributed server is being effectively maintained, since there is no sign of an avalanche effect. This suggests that the distributed server has not been tampered with and that it is safe for us to continue to upload data to it in the future since the integrity of the data that is kept on the server is properly preserved

Authorized licensed use limited to: California State University Sacramento. Downloaded on June 28,2023 at 18:38:33 UTC from IEEE Xplore. Restrictions apply.

As soon as it is established that the distributed server has not compromised its security, the newly created file may be successfully submitted to the server. To accomplish this, the information of each of the documents that are now available are extracted, and their head keys are calculated using the hash key. The blockchain cannot be created without these head keys being present first. The combination among these head keys and the hash key is can then use to great advantage in order to accomplish the goal of obtaining the terminal key. The integrity assessment of the collected information that is being saved on the distributed server is determined, in large part, by the terminal key, regarded as the most important key of all. This terminal key is successfully kept within the databases for the feature assessments of authenticity of the information stored in the server in addition to when the subsequent upload a document is now being conducted. This is done during the subsequent upload a document is now being conducted. The following algorithm 3, which explains the blocks formation operation in its whole, may be seen below.

ALGORITHM 3: Blockchain Formation

```
//Input : File list F_LST
//Output: Terminal Key TERM_KEY
blockchainFormation(F_LST)
1: Start
2: TERM_KEY =" "
3:   for i=0 to size of F_LST
4:     Path= F_LST [i]
5:     F_CONT= getFileContent(Path)
6:     F_CONT = F_CONT + TERM_KEY
7:     H_K=MD5 (F_CONT)
8:     TERM_KEY = signatureKey (H_K)
9:   end for
10:    return TERM_KEY
11: Stop
```

Step 4: Task Accessing – The worker uses the authorized credentials that they established at the moment of enrollment during the initial phase of this method in order to get access to the job. After the worker's credentials have been verified, the system will offer a search tool so that they may find the appropriate job that has been submitted. In order to carry out the search process, you will need to enter the appropriate query through into search field that is associated with the kind of data that is requested. Well before search is executed, the incoming query is "preprocessed" by having its format changed to a string and by going through a conversion procedure. The procedures that are mentioned below will successfully accomplish the preprocessing for you.

Special Symbol Removal - The special symbols used in the English language give the grammatical structures. These unique symbols are of no utility to the search process, and they may be removed without causing any complications at all. As a result, the very first phase of this preparation procedure is removing any special symbols that may have been included in the user's query.

Tokenization – This represents one of the most important aspects in the preprocessing technique, because it has a discernible bearing on how the system is put into action. This is because tokenization divides the string into sections depending on the words inside the string, which ultimately results in the string being converted into a well-indexed string.

Stopword Removal - In the English language, stop words are phrases that are utilized to offer a rhythm to the spoken vocabulary in addition to providing an appropriate connection to various phrases. These words may also be removed to make the language more concise. If you remove this item from the input question, it will not affect the meaning in any way, since it is mostly concerned with aesthetics.

One example that may be used to illustrate stop words is the phrase "going to play," which, after passing through this stage of the preprocessing, gets transformed into the string "go play." This really is one way to explain stop words. This particular input string contains a stop word with in form of the word "to," the removal of which doesn't affect the interpretation of the phrase in any way.

Stemming – The vast majority of certain other terms in the English vocabulary are produced from respective parent terms by attaching a variety of suffixes to the end of the stems of those words. This is accomplished so that the grammatical constructions of the words that are being employed may be distinguished from one another. The procedure of stemming involves converting individual words towards their corresponding parent terms in order to create an appropriate enhancement in the interpretation of the data as a result of the decreased size of the individual words.

For instance, the word "going" may be shortened to "go" by successfully substituting the letter combination "ing" and therefore lowering the overall size of the term. By following these steps, the processing time may be cut down significantly yet the meaning of the word is not altered in any way.

Once the query has been preprocessed, it is sent to the system, which starts a linear search for said retrieval of the appropriate task based on the entered query.

Step 5: Reward, Penalty assignment through Entropy and Decision Tree – Only after job was successfully uploaded into the platform by the task provider, the worker is now capable of accessing this task using the search strategy that was illustrated before. When logging onto the system, the worker is required to submit the appropriate details in order to complete the authentication process. After these credentials have been verified, the worker will have accessibility to the job that has been made available by the task publisher. Prior to the functional assignment of the job, a smart contract will be established between both the worker as well as the task publisher.

The encrypted task that was supplied by the task provider can indeed be successfully decoded at the distributed server through implementation of this smart contract. After that, the job can be re-encrypted through the implementation of a combined effect of signature keys belonging to both the worker as well as the task provider, and it will then be supplied to the worker.

Because of this, we know that only the appropriate worker may execute the job and successfully decode the information. Because of the smart contract, this ensures that perhaps the worker in question is the only one who can see the job that has been published by the task provider. If the worker attempts to communicate this information with yet another individual, the information can be decrypted effectively because it is

Authorized licensed use limited to: California State University Sacramento. Downloaded on June 28,2023 at 18:38:33 UTC from IEEE Xplore. Restrictions apply.

encrypted through the implementation of a conjunction of keys, which the worker has only access to one key. If the worker continues to try to share this information with some other individual, the data cannot be decrypted effectively. If the employee makes an attempt to engage in unethical behavior, the task provider will be able to efficiently and simply identify this behavior.

In the event that any unethical behavior is discovered, the system of reward and punishment will be activated, which may have repercussions for the worker's level.

This distributed transparent and secure data vending platform recognizes a considerable increase in dependability and consistency as a result of the implementation of the decision making approach's if-then constraints, which determine whether the worker should get a reward or a penalty for their performance.

IV. Using the Template

After The research framework for an appropriate Trustworthy Freelancing Crowdsourcing strategy through the application of the blockchain based distributed approach has indeed been accomplished in Java programming language through the deployment of the NetBeans development environment (IDE). This strategy was developed using a laptop that has a storage capacity of 500 gigabytes, a memory capacity of 4 gigabytes, and an Intel i5 central processing unit (CPU). Windows was utilized as the operating system. The MySQL database administration is used in order to accomplish the goal of satisfying the necessity for a database.

The suggested technique has been subjected to in-depth analysis to determine how well it performs in relation to a wide range of performance measures. The process that will be followed during the assessment is shown in the following section.

4.1 Encryption and Decryption Time performance

The data that is being transferred into the decentralized server may be effectively secured via the use of the suggested approach, which makes use of encryption and decryption methods. Quantification of the effectiveness of this strategy is required, and this may be done by following the process that is provided further down. The table that follows contains a tabulation of the time that was required encrypting and decrypting the data based on the different quantities of characters that were employed.

Number of Characters	Encryption Time (in ms)	Decryption Time (in ms)
15	4	3
1808	15	17
2805	33	32
3101	46	54
5312	52	59
6103	64	62
6680	67	63
8159	77	78
9521	82	79
9998	96	98

Table 1: Encryption and Decryption time performance

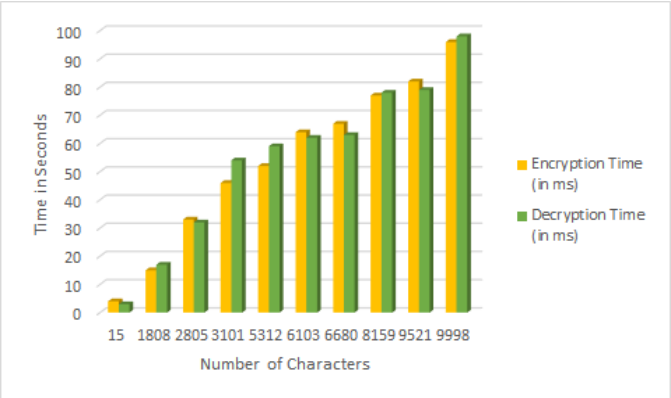

Figure 2: Encryption and Decryption Time

The tabular data were successfully retrieved for the intention of visual analysis in the bar charts which was then presented in the aforementioned figure 2. It should be obvious that the amount of time necessary for the encryption and decryption operation is indeed not exactly related to the number of characters that are supplied. This happens as a result of the premise that the cryptographic procedure that is employed for this method, which is referred to as the Reverse Circle Cipher, is designed and executed in a precise manner. In light of this, the execution of this strategy is quite successful, as evidenced by the performance metrics.

V. Conclusion and Future Scope

The proposed methodology for the purpose of achieving improved data sharing that is reliable and accountable in nature has been successfully expanded in this research article. The proposed approach achieves an effective framework that allows the data providers to securely provide the data to the data requestors or the workers. This is crucial as there are instances of data misuse and manipulation that can cost the data provider expensively. Therefore, this approach initiates with the data publisher and worker joining the system through the creation of the appropriate login credentials by registration. The both actors can now utilize these credentials to gain access to the system by performing login. The publisher then provides the system with the dataset which is first utilized for block generation, key generation to achieve the blockchain. The data is then transferred to the worker that performs the task which is then subjected to the judgement module by the system. The judgement module also performs the integrity evaluation which is then utilized for providing a reward to the worker or a penalty. This approach has been tested for its performance through the use of experimentation which yielded suitable results.

This method can be achieved on a cloud infrastructure for real-time application, which is one of the potential future avenues for this field of study.

Rules :

1. Maintaining project log book is compulsory for every project group
2. Approval of every week work form project guide is compulsory
3. Final approval for project will be based upon log book evaluation
4. It is compulsory to present log book at the time of project exam

Synopsis / Registration form

Project Title :

SOLAR ROADWAYS

Abstract :

The solar roadways is a series of structually engineered solar panels that are driven upon. The idea is to replace all current asphalt roads, parking lots and driveways with solar road panels that collect energy to be used by our homes and businesses. The implementation of solar roadways technology will create the clean energy boom, spurring private investment on a massive scale, with relatively little extra cost.

Aim and Objective :

1. To generate clean renewable energy.
2. The idea is to collect the substantial solar energy which hits these surfaces but is more currently not being utilized.
3. To provide smart grid, less accidents and good elevation.
